Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

An SVE system was installed and is operational at the site to address impacted soil above COGCC Table 915-1 standards. Air samples will be collected and analyzed for GBTEX by EPA Method TO15M GC/MS to determine the mass reduction and system performance. Confirmation soil samples will be collected prior to a no further action request to ensure compliance with COGCC standards. Groundwater impacts were discovered and will be delineated and sampled on a quarterly basis.
