## Site Investigation and Remediation Workplan (Supplemental Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by COGCC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

### INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Cut and cap activities at the Peterson Max 11 wellhead were completed on August 5, 2021. Site investigation activities, field screening, and confirmation soil sampling activities were conducted on August 5, 2021, in accordance with COGCC 900 Series Rules.

### PROPOSED SAMPLING PLAN

#### Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

On August 5, 2021, Entrada Consulting Group field screened soil from 5 locations in the open excavation around the wellhead during cut and cap activities. Surface soil was also screened at one location beneath former surface equipment. No staining or odor was observed and the maximum PID reading was 1.8 parts per million. One soil sample (SS1-8) was collected adjacent the wellhead from the floor of the open excavation at 8 feet below ground surface for laboratory for analysis of BTEX, naphthalene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene and GRO by EPA Method 8260 and for DRO and RRO by EPA Method 8015. One sidewall sample (SS2-3) was analyzed for EC, SAR, and pH by Saturated Paste Method, and boron by Hot Water-Soluble Soil Extract Method. The soil sample locations are shown on the attached figure. The soil sample location information is summarized in the attached Table 1. A photolog documenting sampling activities is attached.

#### Proposed Groundwater Sampling

Groundwater was not encountered.

#### Proposed Surface Water Sampling
