Spill:

Spill Product: Water and Condensate

Extremely Hazardous Substance: No

Acute or chronic health risks: No

Acute or chronic health risks Explained: N/A

Emergency precautions taken: N/A

Did the spill occur in or near a waterway: No

Oil and Gas Incident:

Well Name: Waag 24

Section: 19 **Township:** 7N **Range:** 65W **Longitude:** -104.707353

Latitude: 40.554401

Number of barrels spilled: 2

Have you submitted a Form 19? No

Report Number: 402797802

Chemical Facility / Other:

Number of barrels spilled: N/A

Narrative:

At approximately 16:00 on 8/30/2021 the site operator noticed fluid on the ground above the on-site flowlines. The site was immediately shut in and the lines were blown down. An estimated 1 bbl of fluid containing a mixture of condensate and produced water that was pooled onsite was recovered via hydro-vacuum. Upon excavation on 8/31/2021 a corrosion hole was discovered in the Waag 24

flowline. The release was reported to the surface owner and the COGCC on the morning of 8/31/2021. Following repair of the flowline and excavation of impacted soil, confirmation soil samples will be collected. Future reporting will be directed to the COGCC.
