Site Investigation and Remediation Workplan (Supplemental Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by COGCC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

REMEDIAL ACTION PLAN

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? No

SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

Disposal at approved facility.

REMEDIATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

KPK will removed all impacted media and replace with clean media. KPK does not anticipate groundwater impacts at this time, however if ground water impacts are observed after sampling, KPK will update this project with a remediation plan.

Flowline failure occurred due to 3-inch fiberglass pipe failure. Reason(s) for failure is unknown. 3-inch fiberglass pipe failed in the 12 o'clock position, where a fracture in the pipe was observed. An estimated 30 ft. section of fiberglass pipe has been removed for excavation activities.

Following the approval to backfill, KPK will backfill up to the flowline to make necessary repairs. KPK will install new section of 3-inch fiberglass pipe to reconnect flowline. Flowline will be pressure tested following the completion of repair work.

KPK will collect a composite sample from stockpiled material to determine if soil can be used for backfilling. KPK will analyze the sample for full Table 915 -1 compliance. if there are exceedances (taking into account background sample results), KPK will dispose of soil at a certified disposal facility.

OPERATOR COMMENT

KPK is requesting permission to backfill prior to submitting a request for closure.

See attached documents for all information related to completion of clean up.

Please note there is a clean stockpile on location. KPK had to excavate a ramp to allow the excavator into the excavation. The stockpile is the clean soil from the initial ramp construction. Recent heavy rains may have left the sidewalls of the excavation unstable, KPK strongly discourages entering the excavation without proper safety measures. KPK will make every effort to have personnel or equipment on location for safety if COGCC staff want to enter the excavation.

This is a resubmittal of 8/17/2021 Form 27 (Doc #402777901). Supporting documentation for request to backfill should be referenced in prior Form 27 submittal. The 9/3/2021 resubmittal is to provide flowline failure and corrective action information from FIR Doc #693700764. Flowline information provided for the COGCC Engineering Integrity Group can be found in the Remediation Summary Section of the Remedial Action Plan.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.
