Operator  
Comment:

Topsoil piles have been hydromulched to ensure stabilization. The most recent stormwater inspections have not indicated any erosion of the topsoil berms. Weeds will be mowed where necessary and as close to the top soil berms as possible by 9/15/21. Mowing the hydromulched topsoil berms is not recommended as that will destroy the protective hydromulch and compact the stored top soil. The weed growing season is coming to an end and many of the weeds are already dead/dormant, dying or will be dead in the next 2-3 weeks per a meeting on site

with a local landowner/farmer/agronomist on 9/2/21. The agronomist recommended not spraying weeds this time of year since many are already dead/dormant as it will not do any good. Instead, he recommended delaying weed spraying until spring when the growing season begins. As a test, the few living weeds were spot sprayed on the 0.5 acre reclaimed area on 9/2/21.
