#### COMMENTS:

Crandell 14-26 was previously tied into the production flowline to keep the bradenhead pressure below 50 psi for mitigation. A form 17 annual test was performed on 08/16/2021. A surface and production casing sample were not taken as it was below the threshold. For the 30 minute bradenhead test, the surface casing flowed 11 scf. The samples previously taken showed the gas signature from production and surface casing samples did not match. Crestone will continue with the current mitigation plan and will conduct the next annual test again in 2022.
