<p>During production facility upgrade activities on September 14, 2021, seven confirmation soil samples were collected from the former AST locations and submitted for laboratory analysis of select constituents in Table 915-1 using COGCC-approved methods appropriate for detecting the target analytes, in accordance with COGCC Operator Guidance - Rule 911.A.(4) - Oil and Gas Facility Closure and Rules 913 and 915. Preliminary analytical results indicate that the total petroleum hydrocarbons (TPH) concentration in soil sample AST-B11@3", collected from below a former AST location, was above the COGCC Table 915-1 standard. Preliminary analytical results indicate that constituent concentrations in the remaining six soil samples collected from below the former AST locations were in compliance with the COGCC Table 915-1 standards. Additional soil analytical results are pending laboratory analysis and final reporting. Excavation and assessment activities are ongoing and will be summarized in a forthcoming quarterly Form 27-Supplemental Site Investigation and Remediation Workplan under Remediation Project No. 19920 (approved Form 27 Document No. 402804741). A topographic Site Location Map showing the geographic setting of the release is provided as Figure 1. Soil sample location and field screening data is provided in Table 1.
