Noxious Weed Seeds: NONE

Picture 3: Seed Tag with seed used on site.

Picture 4: Straw Mulching in progress.

Pictures 5 & 6: Finished road and pad areas.

Pictures 7 & 8: Compost and Straw Erosion Logs were installed after seeding/mulching to stop any potential erosion. Soil prep, seeding, and straw crimping were completed on the contour to also help with erosion.

Picture 9: Contour crimping will help with erosion in the draw.

Picture 10: The blanket work and seeding from last fall was effective and had good growth in the swale so we left it as is so as not to set us back another year on grass establishment.
