How was extent determined?			
<p>During production facility decommissioning activities on October 11, 2021, nine confirmation soil samples were collected from the locations of the former facility infrastructure and submitted for laboratory analysis of select constituents in Table 915-1 using COGCC-approved methods appropriate for detecting the target analytes, in accordance with COGCC Operator Guidance - Rule 911.A.(4) - Oil and Gas Facility Closure and Rules 913 and 915. Preliminary analytical results indicate that the total petroleum hydrocarbons (TPH) concentration in soil sample SEP-B03@3", collected from below a former separator location, was above the COGCC Table 915-1 standard. Preliminary analytical results indicate that constituent concentrations in the remaining soil samples were in compliance with COGCC Table 915-1 standards. Additional soil analytical results are pending laboratory analysis and final reporting. Excavation and assessment activities are ongoing and will be summarized in a forthcoming quarterly Form 27-Supplemental Site Investigation and Remediation Workplan under Remediation Project No. 20240 (approved Form 27 Document No. 402823564). A topographic Site Location Map showing the geographic setting of the release is provided as Figure 1. Soil sample location and field screening data are provided in Table 1.
