COMMENTS:

Anderson Trust 42-32 was tied into the production flowline to keep the bradenhead pressure below 50 psi and mitigate fluid for mitigation on 10/12/2021. A form 17 annual test was performed on 01/29/2021. A surface and production casing sample were taken. An additional form 17 test is scheduled in November. For the 30 minute bradenhead test, the surface casing flowed 14 scf. The samples previously taken showed the gas signature from production and surface casing samples did not match. Crestone will continue with the current mitigation plan (just implemented) and will conduct the next test in November 2021.
