OPERATOR COMMENTS:

Attached are recent analytical results from soil samples taken around the Parachute 34-25 location in response to a complaint and the Table 915-1 comparison of those results. Also attached are historical results from 2016 taken and summarized by COGCC at the same Parachute 34-25 location. Site maps for both soil sample events are also attached. For quick reference, an additional table comparison is attached to indicate that conditions have not deteriorated at this location specifically EC, SAR and pH. With the information contained herein, at this time, ENR is requesting closure of the spill related to the complaint at the Parachute 34-25 location.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.

COA Type**Description**

	Based on review of information presented it appears that no further action is necessary at this time. No impacts over COGCC Table 915-1 have been documented. However, should future conditions at the site indicate contaminant concentrations in soils exceeding COGCC Table 915-1 standards or if ground water or vegetation is found to be significantly impacted, further investigation and/or remediation activities may be required at the site.
