COMMENTS:

Laramie is requesting permission to "pull" back the bird netting on the referenced pond during the winter to prevent damage from snow and ice to the netting. The pond is permitted through the CDPHE as a central wastewater management facility and Laramie is required to use Reasonable Available Control Technology (RACT) to control emissions from volatile organic compounds (VOC) from trace hydrocarbons that are found in produced, flowback, and frac water. The Pond G RACT uses a pre-treatment system for the pond using two stages of oil-water separation to remove residual oil contained in the produced water accepted by the Facility. A gunbarrel oil-water separator followed by secondary (oil) skim tanks are used to remove residual oil present in the water prior to transfer to the Pond G surface impoundment. Removal of the oil prior to entry into the pond will limit the amount of hydrocarbon that may escape to the atmosphere during storage. Operation of this facility is permitted by the COGCC and as a result Laramie is prohibited from allowing any accumulations of oil on the surface of the water in the pond. The code specifically prohibits "oil sheen" at any time. This stipulation, in addition to the aforementioned RACT and other processes, minimizes the risk of exposure to hydrocarbons to any birds during winter months. Use of this system will help protect any birds that enter the pond and limit their exposure if there might be any open water. Once the winter season is over, the net will be put back in service and re-installed over the pond.
