TRANSPORTATION PLAN

Submitted with Form 2A Application for the

Blue 3-65 33-32-31

Plan Date: August 27, 2021

Submittal Date: September 15, 2021

The attached Traffic Memorandum and Supplement provided by LSC Transportation Consultants, Inc. was approved by the City of Aurora pursuant to the requirements of the Operator Agreement executed June 5, 2019. This Transportation Plan is being submitted as substantially equivalent and consistent with the requirements of Rule 304.c.(6).

Re: CPR - Blue Pad
Traffic Impact Analysis
Aurora, CO
LSC #210210

Dear Mr. Knutson:

In response to your request, LSC Transportation Consultants, Inc. has prepared this Traffic Impact Analysis for the proposed CPR - Blue Pad well site in Aurora, Colorado. The site is located south of E. 26th Avenue to the east of Monaghan Road as shown in Figure 1.

REPORT CONTENTS

The report contains the following: the existing roadway and traffic conditions in the vicinity of the site including the lane geometries, traffic controls, etc.; the existing weekday peak-hour traffic volumes; the existing daily traffic volumes in the area; the typical weekday site-generated traffic volume projections for site; the assignment of the projected traffic volumes to the area roadways for six different scenarios; the projected total traffic volumes on the area roadways for six different scenarios; the site's projected traffic impacts; and any recommended roadway improvements to mitigate the traffic impacts from the site. The estimated timing of each phase is the best information available today but is subject to change over time.

LAND USE AND ACCESS

The site is proposed as an oil and gas operation with seven well heads. Full movement access is proposed to E. 26th Avenue via an existing private access road as shown in Figures 1 and 2. There is adequate sight distance along E. 26th Avenue at this location.

The site will be developed in 12 phases as follows:

- | | |
|---|-----------|
| 1. Construction Phase 1 Set up | 1 day |
| 2. Construction Phase 1 (Earthwork of site and access road) | 33 days |
| 3. Construction Phase 1 Breakdown | 1 day |
| 4. Construction Phase 2 (Finishing work and access road construction) | 10 days |
| 5. Drilling Set Up | 5 days |
| 6. Drilling | 59.5 days |

7. Drilling Breakdown	3 days
8. Completion & Flow Back Set Up	3 days
9. Completion	70 days
10. Flowback	35 days
11. Completion & Flow Back Breakdown	3 days
12 Production/Operations	Ongoing

These 12 phases are detailed in Table 1.

ROADWAY AND TRAFFIC CONDITIONS

Area Roadways

The major roadways in the site's vicinity are shown on Figure 1 and are described below.

- **E. 26th Avenue** is an east-west, two-lane roadway north of the site. The intersection with Hudson Mile Road is stop-sign controlled. The posted speed limit is 45 mph.
- **Hudson Mile Road** is a north-south, two-lane roadway east of the site. The intersections with E. 26th Avenue and Colfax Avenue (US 36) are stop-sign controlled. The posted speed limit is 45 mph.
- **Colfax Avenue (US 36)** is an east-west, two-lane highway south of the site. It is classified as R-B (Rural Highway) by CDOT. The intersection with Hudson Mile Road is stop-sign controlled. The posted speed limit is 55 mph near the study area. The CDOT straight line diagram is attached for reference.
- **Existing or Proposed Private Access Roads** are gravel roadways that will provide access to the site from the public roadway network. They will be maintained to accommodate construction traffic.

Existing Traffic Conditions

Figure 3 shows the existing weekday traffic volumes, lane geometry, traffic controls, and the posted speed limits in the vicinity of the site. The weekday peak-hour traffic volumes and average daily traffic volumes are from the attached traffic counts conducted by Counter Measures in March, 2021.

2022 Background Traffic

Figure 4 shows the 2022 background traffic volumes which assumes a ten percent adjustment for the ongoing pandemic and an annual growth rate of two percent.

Existing and 2022 Background Levels of Service

Level of service (LOS) is a quantitative measure of the level of congestion or delay at an intersection. Level of service is indicated on a scale from "A" to "F." LOS A is indicative of little congestion or delay and LOS F is indicative of a high level of congestion or delay. Attached are specific level of service definitions for signalized and unsignalized intersections.

The intersections in the study area were analyzed to determine the existing and 2022 background levels of service using Synchro. Table 2 shows the level of service analysis results. The level of service reports are attached.

- **Colfax Avenue (US 36)/Hudson Mile Road:** All movements at this unsignalized intersection currently operate at LOS "A" during both morning and afternoon peak-hours and are expected to do so through 2022.
- **Hudson Mile Road/E. 26th Avenue:** All movements at this unsignalized intersection currently operate at LOS "A" during both morning and afternoon peak-hours and are expected to do so through 2022.

TRIP GENERATION

Table 3 shows the estimated average weekday daily and peak-hour trip generation by vehicle type based on information provided by the applicant. Estimates are given for 12 different phases of the project including:

1.	Construction Phase 1 Set up	1 day
2.	Construction Phase 1 (Earthwork of site and access road)	33 days
3.	Construction Phase 1 Breakdown	1 day
4.	Construction Phase 2 (Finishing work and access road construction)	10 days
5.	Drilling Set Up	5 days
6.	Drilling	59.5 days
7.	Drilling Breakdown	3 days
8.	Completion & Flow Back Set Up	3 days
9.	Completion	70 days
10.	Flowback	35 days
11.	Completion & Flow Back Breakdown	3 days
12	Production/Operations	Ongoing

TRIP ASSIGNMENT

Figures 5a through 5f show the estimated assignment of site-generated traffic in passenger car equivalents for six of the twelve scenarios.

Scenario 4 - Construction 2: Figure 5a shows the estimated 2022 site-generated traffic volumes expected to occur during the 10-day Construction Phase 2.

Scenario 6 - Drilling: Figure 5b shows the estimated 2022 site-generated traffic volumes expected to occur during the 59.5-day drilling phase.

Scenario 8 - Completion and Flowback - Setup: Figure 5c shows the estimated 2022 site-generated traffic volumes expected to occur during the 3-day set-up phase.

Scenario 9 - Completion and Flowback - Completion - Figure 5d shows the estimated 2022 site-generated traffic volumes expected to occur during the 70-day completion phase.

Scenario 10 - Completion and Flowback - Flowback: Figure 5e shows the estimated 2022 site-generated traffic volumes expected to occur during the 35-day flowback phase.

Scenario 11 - Completion and Flowback - Breakdown: Figure 5f shows the estimated 2022 site-generated traffic volumes expected to occur during the 3-day breakdown phase.

TOTAL TRAFFIC

Figures 6a through 6f show the 2022 total traffic for six of the twelve scenarios.

Scenario 4 - Construction 2: Figure 6a shows the estimated 2022 total traffic volumes during the 10-day Construction Phase 2 if the site is allowed to haul during the commuter peak-hours (7:00 - 9:00 a.m. and 4:00 - 6:00 p.m.).

Scenario 6 - Drilling: Figure 6b shows the estimated 2022 total traffic volumes during the 59.5-day drilling phase if the site is allowed to haul during the commuter peak-hours (7:00 - 9:00 a.m. and 4:00 - 6:00 p.m.).

Scenario 8 - Completion and Flowback - Setup: Figure 6c shows the estimated 2022 total traffic volumes during the 3-day set-up phase if the site is allowed to haul during the commuter peak-hours (7:00 - 9:00 a.m. and 4:00 - 6:00 p.m.).

Scenario 9 - Completion and Flowback - Completion - Figure 6d shows the estimated 2022 total traffic volumes during the 70-day completion phase if the site is allowed to haul during the commuter peak-hours (7:00 - 9:00 a.m. and 4:00 - 6:00 p.m.).

Scenario 10 - Completion and Flowback - Flowback: Figure 6e shows the estimated 2022 total traffic volumes during the 35-day flowback phase if the site is allowed to haul during the commuter peak-hours (7:00 - 9:00 a.m. and 4:00 - 6:00 p.m.).

Scenario 11 - Completion and Flowback - Breakdown: Figure 6f shows the estimated 2022 total traffic volumes during the 3-day breakdown phase if the site is allowed to haul during the commuter peak-hours (7:00 - 9:00 a.m. and 4:00 - 6:00 p.m.).

PROJECTED LEVELS OF SERVICE

The intersections in the study area were analyzed as appropriate to determine the total levels of service during the six scenarios detailed above. Table 2 shows the level of service analysis results. The level of service reports are attached.

- **Colfax Avenue (US 36)/Hudson Mile Road:** All movements at this unsignalized intersection are expected to operate at LOS "B" or better during both morning and afternoon peak-hours through 2022 in all scenarios.
- **Hudson Mile Road/E. 26th Avenue:** All movements at this unsignalized intersection are expected to operate at LOS "A" during both morning and afternoon peak-hours through 2022 in all scenarios.

TRAFFIC CONTROL PLAN

The City of Aurora is restricting all non-essential site trips during the commuter hours of 7:00 a.m. to 9:00 a.m. and 4:00 p.m. to 6:00 p.m. which will greatly reduce impacts to commuter traffic. A traffic control plan should be developed to warn motorists of heavy truck traffic during construction of the site. Auxiliary turn lanes are not recommended because the impacts are temporary and the traffic control and construction of one or more turn lanes would be more impactful than the temporary impact with implementation of a traffic control plan.

CONCLUSIONS AND RECOMMENDATIONS

Trip Generation

1. The impact will be highest at about 422 passenger car equivalent trips per day in Scenario 9 (Completion Phase - 70 days).
2. The long-term impact will be minimal due to product being removed from the site via pipeline.

Projected Levels of Service

3. All movements at the unsignalized intersections analyzed are expected to operate at LOS "B" or better during both morning and afternoon peak-hours through 2022 in all scenarios analyzed. Operations will likely be even better because the City is restricting all non-essential site trips during the commuter hours of 7:00 - 9:00 a.m. and 4:00 - 6:00 p.m.

Conclusions

4. The impact of the proposed CPR - Blue Pad well site can be accommodated by the existing roadway network with the following recommendations.

Recommendations

5. The City of Aurora is restricting all non-essential site trips during the commuter hours of 7:00 a.m. to 9:00 a.m. and 4:00 p.m. to 6:00 p.m. which will greatly reduce impacts to commuter traffic. A traffic control plan should be developed to warn motorists of heavy truck traffic during construction of the site. Auxiliary turn lanes are not recommended because the impacts are temporary and the traffic control and construction of one or more turn lanes would be more impactful than the temporary impact with implementation of a traffic control plan.

* * * * *

We trust our findings will assist you in gaining approval of the proposed CPR - Blue Pad well site development. Please contact me if you have any questions or need further assistance.

Sincerely,

LSC TRANSPORTATION CONSULTANTS, INC.

LEVEL OF SERVICE DEFINITIONS

From *Highway Capacity Manual, Transportation Research Board, 2016, 6th Edition*

UNSIGNALIZED INTERSECTION LEVEL OF SERVICE (LOS)

Applicable to Two-Way Stop Control, All-Way Stop Control, and Roundabouts

LOS	Average Vehicle Control Delay	Operational Characteristics
A	<10 seconds	Normally, vehicles on the stop-controlled approach only have to wait up to 10 seconds before being able to clear the intersection. Left-turning vehicles on the uncontrolled street do not have to wait to make their turn.
B	10 to 15 seconds	Vehicles on the stop-controlled approach will experience delays before being able to clear the intersection. The delay could be up to 15 seconds. Left-turning vehicles on the uncontrolled street may have to wait to make their turn.
C	15 to 25 seconds	Vehicles on the stop-controlled approach can expect delays in the range of 15 to 25 seconds before clearing the intersection. Motorists may begin to take chances due to the long delays, thereby posing a safety risk to through traffic. Left-turning vehicles on the uncontrolled street will now be required to wait to make their turn causing a queue to be created in the turn lane.
D	25 to 35 seconds	This is the point at which a traffic signal may be warranted for this intersection. The delays for the stop-controlled intersection are not considered to be excessive. The length of the queue may begin to block other public and private access points.
E	35 to 50 seconds	The delays for all critical traffic movements are considered to be unacceptable. The length of the queues for the stop-controlled approaches as well as the left-turn movements are extremely long. There is a high probability that this intersection will meet traffic signal warrants. The ability to install a traffic signal is affected by the location of other existing traffic signals. Consideration may be given to restricting the accesses by eliminating the left-turn movements from and to the stop-controlled approach.
F	>50 seconds	The delay for the critical traffic movements are probably in excess of 100 seconds. The length of the queues are extremely long. Motorists are selecting alternative routes due to the long delays. The only remedy for these long delays is installing a traffic signal or restricting the accesses. The potential for accidents at this intersection are extremely high due to motorist taking more risky chances. If the median permits, motorists begin making two-stage left-turns.
