COMMENTS:

The bradenhead test dated 11/19/2021 showed that Opsi had built on the bradenhead after the conclusion of the mitigation strategy, indicating a successful mitigation. To avoid venting the bradenhead gas was routed to MESSCO catadyne heater within 20' of the wellhead. Extraction (Civi Resources) would like to request returning the well to annual testing requirements.

Flow rate data was collected during the mitigation process and showed a flowrate of 18.81MSCF/D and a volume of 0.1962MSCF. Additionally, a bradenhead and production gas sample were taken for comparison. The bradenhead gas sample is thermogenic in origin and when compared to the production gas sample taken the bradenhead gas sample is similar in thermal maturity.
