Site Investigation and Remediation Workplan (Initial Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by COGCC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

UNDETERMINED	SOILS	WELLHEAD, TANK BATTERY	VISIBLE STAINING

INITIAL ACTION SUMMARY

Description of initial action or emergency response measures taken to abate, investigate, and/or remediate impacts associated with E&P Waste.

IN PROCESS OF REMOVING ALL EQUIPMENT TO FACILITATE SOIL INVESTIGATION. ANY VISIBLY STAINED SOIL WILL BE REMOVED AND STOCKPILED ONSITE UNTIL CONFIRMATION SAMPLING HAS BEEN COMPLETED.

PROPOSED SAMPLING PLAN

Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

Soil sampling will be conducted at the pit location, treater pad, tank battery, and wellhead pad. Samples will be analyzed for TPH and BTEX. Grab sample will be taken at the pit area for the pit bottom and grab samples for the pit banks. 2 composite samples will be taken from a grid at the tank battery. One composite sample each will be taken from the treater pad and wellhead. One composite sample each will be taken for inorganics at the tank battery and pit and analyzed for EC, SAR, pH and boron. One background sample will be taken for inorganics.

General Comments**User Group****Comment****Comment Date**

Environmental	Confirmation samples should be collected from the areas that had visibly impacted soils removed. Photo documentation of the areas before and after soil removal (confirmation soil sampling) should be provided on subsequent Form 27. Discrete soil samples should be collected at the depth of riser plugging (tanks, separator, wellhead, etc.), for the purpose of facility closure documentation. Discrete samples are required for confirmation sampling. A lab familiar with agricultural analysis must be used for the Soil Suitability for Reclamation parameters. Guidance documents for facility closure are available on the COGCC website.	12/27/2021
