Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

A TEP pumper discovered produced water leaking out of the production separator. The pumper found that a 1-inch produced water dump line inside the separator was broken. The produced water leaked outside of the separator and soaked into the soils on the south and west sides of the separator. No fluids could be recovered. The cause of the spill is corrosion of the threads on the carbon steel water line. Immediately upon discovery, TEP personnel isolated the defective line in the separator. The line was immediately replaced, tested, and has been put back into service. Soil samples were collected from impacted areas outside of the separator. The samples were field-screened for Total Petroleum Hydrocarbon (TPH) content, which ranged from 94 ppm to 444 ppm. TEP is in the process of excavating the contaminated soils which will be taken to an off-site commercial disposal facility. No ground/surface resources water or public water systems were threatened or impacted by this release.

Basis for Closure:    ☒ Corrective Actions Completed (documentation attached, check all that apply)

☒ Horizontal and Vertical extents of impacts have been delineated.

☒ Documentation of compliance with Table 915-1 is attached.

☒ All E&P Waste has been properly treated or disposed.

☐ Work proceeding under an approved Form 27 (Rule 912.c).

Form 27 Remediation Project No: \_\_\_\_\_

☐ SUSPECTED Spill/Release did not occur or was below Rule 912.a.(5) reporting thresholds.

### OPERATOR COMMENTS:

Please forward onto John Heil

This Supplemental Form 19 is being submitted to request closure of the PA 12-28 produced water spill. All of the impacted area has been excavated and materials hauled off to an approved commercial E&P waste disposal facility.

Spill reporting to the BLM included the same information outlined within the Initial Form 19 to the COGCC, which also outlined the sampling and analysis. BLM representatives requested that an additional sample under the separator unit be collected during the follow-up sampling.

The follow-up sampling conducted after the hydro-excavating was conducted indicate that SAR concentrations at SL-1 exceeded and additional excavated was needed. The additional sample (SL-5) from under the separator indicated soils did not exceed Table 915-1 thresholds with consideration to background levels for arsenic and inorganics.

An additional 1-foot was removed from around the SL-1 area and a sample re-collected for SAR. Results indicate that soils no longer exceed Table 915-1 thresholds. TEP is requesting consideration to the arsenic and inorganic exceedances as background levels are comparable.

(Note: 10-Day Supplemental Form 19 submitted on 10/2/21 is still pending COGCC review and contains additional spill information not provided in this spill closure request - See Doc# 402829267).

TEP is requesting no further action (NFA) and closure of spill ID 481103

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.
