Subject: **Dry Gas Release Assessment**
 SGV Federal Dry Gas Release
 South Grand Valley
 Garfield County, Colorado

Dear Mr. Janicek:

WSP USA Inc. (WSP), on behalf of Caerus Oil and Gas LLC (Caerus), has completed soil screening and initial characterization confirmation soil sampling associated with the South Grand Valley (SGV) Federal Pipeline Release (Site). The initial characterization investigation and confirmation soil samples were collected pursuant condition of approvals (COA) listed in the Colorado Oil and Gas Conservation Commission (COGCC) Spill/Release Report (Initial/w Supplemental) Form 19 Document Number 402899262. The Site is located in Caerus' SGV area of operation in Garfield County, Colorado (Figure 1).

SOIL SAMPLING ACTIVITIES – SGV FEDERAL DRY GAS RELEASE

On December 14, 2021, WSP personnel completed initial soil screening and collected confirmation samples from, and around the point of release (POR) associated with the November 18, 2021 dry gas release within the right-of-way (ROW) of the SGV Federal pipeline. The confirmation soil sampling was conducted by a WSP geologist who inspected the soil for the presence or absence of petroleum hydrocarbon odor/staining. Using a spade shovel, the geologist screened the length of the previously excavated pipeline ROW for hydrocarbon impacts on 10-foot lateral intervals. The areas within the excavation which exhibited the highest degree of impact based on visual and olfactory observations were field screened using a photoionization detector (PID) to monitor for the presence or absence of volatile organic vapors in the soil headspace. The screening depths within the excavation were 7 feet below ground surface (bgs). In order to determine the POR, the section of pipeline under investigation was isolated and was then pressurized with compressed air to identify the POR. The POR was located along the northern edge of the open ROW excavation at a latitude and longitude of 39.377994, -108.056034. Based on PID field screening values, and onsite observations, one soil sample was collected immediately below the SGV Federal pipeline POR at 7 feet bgs (20211214-SGVF-(POR)@7') and three point of compliance (POC) samples (20211214-SGVF-(POC N1)@7', 20211214-SGVF-(POC M1)@7', and 20211214-SGVF-(POCS1)@7') were collected from the north, middle, and southern areas of the open excavation. At least six inches of soil was removed from the base of the excavation prior to collecting each of the confirmation soil samples to ensure fresh representative samples were collected. All confirmation soil samples were collected in clean, laboratory prepared containers and submitted to Pace Analytical (Pace) of Mount Juliet, Tennessee for analysis of constituents listed in COGCC Table 915-1 Protection of Groundwater Soil Screening Level Concentrations (PGSSLC) milligrams per kilogram (mg/kg) Risk Based (R) and Maximum Concentration Level (MCL) Based (M). The soil screening results are summarized in the enclosed Table 1. A photolog of the investigative soil sampling and field screened areas associated with the SGV Federal Release is included in Enclosure A. Figure 2 illustrates the ROW excavation extent, POR, and POC confirmation soil sample locations.

ANALYTICAL RESULTS – SGV FEDERAL DRY GAS RELEASE

Laboratory analytical results of all confirmation soil samples collected from the pipeline excavation indicate exceedances of COGCC Table 915-1 PGSSLC (M) for arsenic, barium, benzene, toluene. Arsenic exceedances range from 2.92 mg/kg in soil sample 20211214-SGVF-(POR)@7' to 4.02 mg/kg in soil sample 20211214-SGVF-(POCS1)@7'. Barium exceedances range from 180 mg/kg in soil sample 20211214-SGVF-(POC M1)@7' to 601 mg/kg in soil sample 20211214-SGVF-(POR)@7'. Benzene concentrations ranged from 0.0478 mg/kg in soil sample 20211214-SGVF-(POC N1)@7' to 8.44 mg/kg in soil sample 20211214-SGVF-(POR)@7'. Toluene concentrations ranged from 0.728 mg/kg in soil sample 20211214-SGVF-(POC N1)@7' to 56.7 mg/kg in soil sample 20211214-SGVF-(POR)@7'. Additionally, all confirmation soil samples indicate exceedances COGCC Table 915-1 PGSSLC (R) for 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, 1-methylnaphthalene, 2-methylnaphthalene, and naphthalene. Concentrations of 1,2,4-trimethylbenzene ranged from 2.18 mg/kg in soil sample 20211214-SGVF-(POC N1)@7' to 48.3 mg/kg in soil sample 20211214-SGVF-(POC M1)@7'. Concentrations of 1,3,5-trimethylbenzene ranged from 1.75 mg/kg in soil sample 20211214-SGVF-(POC N1)@7' to 34.1 mg/kg in soil sample 20211214-SGVF-(POR)@7'. Concentrations of 1-methylnaphthalene ranged from 0.480 mg/kg in sample 20211214-SGVF-(POC N1)@7' to 21.8 mg/kg in soil sample 20211214-SGVF-(POC M1)@7'. Concentrations of 2-methylnaphthalene ranged from 0.527 mg/kg in soil sample 20211214-SGVF-(POC N1)@7' to 52.6 mg/kg in soil sample 20211214-SGVF-(POC M1)@7'. Naphthalene concentrations ranged from 0.0611 mg/kg in soil sample 20211214-SGVF-(POC N1)@7' to 16.3 mg/kg in soil sample 20211214-SGVF-(POC M1)@7'. The POR confirmation soil sample 20211214-SGVF-(POR)@7' and the POC soil sample 20211214-SGVF-(POC M1)@7' exceeded COGCC Table 915-1 PGSSLC (M) for ethylbenzene and total xylenes. Ethylbenzene concentrations were 14.7 mg/kg and 4.09 mg/kg, respectively. Total xylene concentrations were 142 mg/kg and 64.8 mg/kg, respectively. Confirmation soil sample 20211214-SGVF-(POC M1)@7' exceeded COGCC Table 915-1 PGSSLC (R) for fluorene with a concentration of 1.80 mg/kg. The POR confirmation soil sample 20211214-SGVF-(POR)@7' indicated an exceedance of COGCC Table 915-1 for boron with 2.04 milligram/l (mg/l). All confirmation soil samples indicated exceedances of COGCC Table 915-1 Cleanup Concentrations (CC) for sodium absorption ratio (SAR) and total petroleum hydrocarbon (TPH). SAR exceedances ranged from 12.4 in soil sample 20211214-SGVF-(POC M1)@7' to 33.80 in soil sample 20211214-SGVF-(POC N1)@7'. TPH exceedances ranged from 653 mg/kg in soil sample 20211214-SGVF-(POC N1)@7' to 8,103 mg/kg in soil sample 20211214-SGVF-(POC M1)@7'. Confirmation soil samples 20211214-SGVF-(POC N1)@7', 20211214-SGVF-(POC M1)@7', and 20211214-SGVF-(POCS1)@7' exceeded the COGCC Table 915-1 CC for electrical conductivity (EC) with concentrations ranging from 4.540 millimhos per centimeter (mmhos/cm) in soil sample 20211214-SGVF-(POC M1)@7' to 5.200 mmhos/cm in soil sample 20211214-SGVF-(POC N1)@7'

All other analytes were either below the laboratory detection limit or within the COGCC Table 915-1 PGSSLCs. The soil analytical results are summarized in the enclosed Table 1. The laboratory analytical report is provided in Enclosure B.

CONCLUSIONS – SGV FEDERAL DRY GAS RELEASE

Based on the analytical data provided from the initial assessment sampling, there are remaining COGCC Table 915-1 exceedances of arsenic, barium, boron, SAR, EC, TPH, benzene, toluene, 1,2,4- trimethylbenzene, 1,3,5 trimethylbenzene, 1-methylnaphthalene, 2-methylnaphthalene, naphthalene, ethylbenzene, total xylenes, fluorene associated with the recent pipeline dry gas release. However, exceedances of arsenic are documented within the pipeline excavation ROW but are within background concentrations documented in background soil samples located at the adjacent pad, SGV 1F (COGCC Facility ID: 334367). The geographic proximity of the two locations is depicted on the attached Figure 3 along with the associated background sample locations.

WSP recommends that Caerus continue with excavation and source removal of impacted soils immediately beneath the POR, and to the north and south directions within the ROW corridor. Additional excavation and source removal should extend beyond the current excavation base (6.5 feet bgs) to remove vertical impacts from the dry gas release. Lateral excavation in all cardinal directions will be based on observations when removing the source vertically form the pipeline ROW. Following the excavation and source removal activities, additional confirmation soils samples will be collected along the ROW excavation base and sidewalls to confirm contaminants have been removed. WSP

recommends that Caerus request the COGGC Director to analyze all future soil samples under a reduced analytical suite of barium, boron, SAR, EC, TPH, benzene, toluene, ethylbenzene, total xylenes, 1,2,4- trimethylbenzene, 1,3,5 trimethylbenzene, 1-methylnaphthalene, 2-methylnaphthalene, naphthalene, and fluorene.

Please contact us at (970) 618-4514 or (970) 658-7025 if you have any questions regarding this report or require additional information.

CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.	1 Cp
ND	Not detected at the Reporting Limit (or MDL where applicable).	2 Tc
RDL	Reported Detection Limit.	3 Ss
Rec.	Recovery.	4 Cn
RPD	Relative Percent Difference.	5 Sr
SDG	Sample Delivery Group.	6 Qc
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.	7 Gi
U	Not detected at the Reporting Limit (or MDL where applicable).	8 Al
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.	9 Sc
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.	
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.	
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.	
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.	
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.	
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.	
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.	
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.	
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.	
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.	
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.	

Qualifier	Description
J	The identification of the analyte is acceptable; the reported value is an estimate.
J1	Surrogate recovery limits have been exceeded; values are outside upper control limits.
J2	Surrogate recovery limits have been exceeded; values are outside lower control limits.
J3	The associated batch QC was outside the established quality control range for precision.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
J7	Surrogate recovery cannot be used for control limit evaluation due to dilution.
T8	Sample(s) received past/too close to holding time expiration.
V	The sample concentration is too high to evaluate accurate spike recoveries.

CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.	¹ Cp
RDL	Reported Detection Limit.	² Tc
Rec.	Recovery.	³ Ss
RPD	Relative Percent Difference.	⁴ Cn
SDG	Sample Delivery Group.	⁵ Sr
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.	⁶ Qc
U	Not detected at the Reporting Limit (or MDL where applicable).	⁷ Gl
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.	⁸ Al
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.	⁹ Sc
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.	
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.	
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.	
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.	
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.	
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.	
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.	
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.	
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.	
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.	

Qualifier Description

J	The identification of the analyte is acceptable; the reported value is an estimate.
J5	The sample matrix interfered with the ability to make any accurate determination; spike value is high.
T8	Sample(s) received past/too close to holding time expiration.
