Subject: **Report of Work Completed**
Dumpline Release H7
Mamm Creek Field
Garfield County, Colorado

Dear Mr. Janicek:

WSP USA Inc. (WSP), on behalf of Caerus Oil and Gas LLC (Caerus), conducted delineation soil sampling associated with hydrocarbon impacts that were identified from previous point of release (POR) soil sampling at the production well KRK 7-7A dumpline release discovered at the KRK-67S92W7SENE (H7) (Facility ID: 334864) pad location (Site). These activities were completed as a continuation assessment associated with the failed dumpline at the Site. An initial POR sampling was conducted on October 20, 2021 after a Caerus inspector discovered a leak while completing Annual Pressure Testing at the Site. This document serves as a report of work completed (ROWC) which details all investigative assessment activities since November 4, 2021. All initial investigative activities can be referenced under Colorado Oil and Gas Conservation Commission (COGCC) Initial Site Investigation and Remediation Work Plan Document Number 402845414. The Site is located in the Caerus Mamm Creek area of operation in Garfield County, Colorado (Figure 1).

ASSESSMENT SOIL SAMPLING ACTIVITIES – H7 DUMPLINE RELEASE

On November 4, 2021, WSP personnel visited the Site to complete additional assessment activities directly beneath the POR location associated with the production well KRK 7-7A dumpline release. With the assistance of Western Slope Field Services, Inc. (WCO), one hydro-vacuum (hydro-vac) pothole was advanced directly beneath the POR location to a total depth of 15 feet below ground surface (bgs). During advancement of the pothole, soil samples were collected using a hand auger at depths of 9 feet, 12 feet, and 15 feet bgs. The pothole soil sampling activities were conducted by a WSP geologist who inspected the soil samples for the presence or absence of petroleum hydrocarbons odor and/or staining. The soil samples were characterized by visually inspecting the confirmation soil samples and field screening the soil head space using a photoionization detector (PID) to monitor for the presence or absence of volatile organic vapors. All soil samples were submitted to Pace Analytical (Pace) of Mount Juliet, Tennessee for analysis of a reduced analytical suite previously approved by the Director which included barium, chromium (VI), total petroleum hydrocarbons (TPH), benzene, toluene, ethylbenzene, and total xylenes (BTEX), 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, naphthalene, 1-methylnaphthalene, 2-methylnaphthalene, SAR, and pH. The approved analyte list was evaluated under the COGCC Table 915-1 Protection of Groundwater Soil Screening Level Concentrations milligrams per kilogram (mg/kg) Risk Based (R) and Maximum Concentration Level (MCL) Based (M). The pothole location is depicted on the enclosed Figure 2.

On November 18, 19, and 22, 2021, a WSP geologist and Colorado Drilling and Sampling (CD&S) returned to the Site to further delineate the hydrocarbon impacts using a track mounted drill rig equipped with solid stem auger. Prior to drilling activities, all proposed boring locations were cleared for underground utilities with a hydro-vac truck by WCO to depths ranging from 7 feet to 9 feet bgs. A total of five soil borings were advanced: one immediately

WSP USA
820 MEGAN AVENUE, UNIT B
RIFLE CO 81650

Tel.: 970-285-9985
wsp.com

adjacent to the POR location and four in each cardinal direction of the POR location. The boreholes ranged in depth from 40 feet bgs to 40.5 feet bgs.

All drilling oversight, soil sampling, and screening activities were conducted by a WSP geologist who screened each borehole at five-foot intervals and inspected for the presence or absence of petroleum hydrocarbons odor and/or staining. Soil was characterized utilizing the United Soil Classification System by visually inspecting the soil samples and field screening the soil head space using a PID to monitor for the presence or absence of volatile organic compounds. Soil samples were collected when split spoon recovery was sufficient for laboratory submittal and when impacts were observed. Samples were collected at each 10-foot interval starting from the bottom of the pothole to the boring terminus. A total of four soil samples were submitted from each boring. All soil samples were collected in clean laboratory-prepared containers and submitted to Pace for analysis of the COGCC approved reduced analytical suite mentioned above. The soil boring logs are included in Enclosure A and laboratory analytical reports are provided in Enclosure B. The soil boring locations are depicted on Figure 2.

ANALYTICAL RESULTS – H7 DUMPLINE RELEASE

Laboratory analytical results of the POR pothole soil samples collected on November 4, 2021 indicate that all three-soil sample exceeded the COGCC Table 915-1 PGSSLC (M) for barium, benzene, toluene, ethylbenzene, total xylenes and exceeded the COGCC Table 915-1 PGSSLC (R) for 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, 1-methylnaphthalene, 2-methylnaphthalene, and naphthalene. The R and M exceedances are summarized below:

- Barium concentrations were exceeded by soil samples 20211104-H7(POR)@ 9', 20211104-H7(POR)@ 12', 20211104-H7(POR)@ 15' with concentrations ranging from 259 mg/kg to 887 mg/kg;
- Benzene concentrations were exceeded by soil samples 20211104-H7(POR)@ 9', 20211104-H7(POR)@ 12', 20211104-H7(POR)@ 15' with concentrations ranging from 0.606 mg/kg to 1.46 mg/kg;
- Toluene concentrations were exceeded by soil samples 20211104-H7(POR)@ 9', 20211104-H7(POR)@ 12', 20211104-H7(POR)@ 15' with concentrations ranging from 13.7 mg/kg to 41.6 mg/kg;
- Ethylbenzene concentrations were exceeded by soil samples 20211104-H7(POR)@ 9', 20211104-H7(POR)@ 12', 20211104-H7(POR)@ 15' with concentrations ranging from 3.97 mg/kg to 11.7 mg/kg;
- Total xylenes concentrations were exceeded by soil samples 20211104-H7(POR)@ 9', 20211104-H7(POR)@ 12', 20211104-H7(POR)@ 15' with concentrations ranging from 88.2 mg/kg to 197 mg/kg;
- 1,2,4-trimethylbenzene concentrations were exceeded by soil samples 20211104-H7(POR)@ 9', 20211104-H7(POR)@ 12', 20211104-H7(POR)@ 15' with concentrations ranging from 25.7 mg/kg to 62.2 mg/kg;
- 1,3,5-trimethylbenzene concentrations were exceeded by soil samples 20211104-H7(POR)@ 9', 20211104-H7(POR)@ 12', 20211104-H7(POR)@ 15' with concentrations ranging from 24.8 mg/kg to 65.1 mg/kg;
- 1-methylnaphthalene concentrations were exceeded by soil samples 20211104-H7(POR)@ 9', 20211104-H7(POR)@ 12', 20211104-H7(POR)@ 15' with concentrations ranging from 0.242 mg/kg to 1.37 mg/kg;
- 2-methylnaphthalene concentrations were exceeded by soil samples 20211104-H7(POR)@ 9', 20211104-H7(POR)@ 12', 20211104-H7(POR)@ 15' with concentrations ranging from 0.613 mg/kg to 3.47 mg/kg; and
- Naphthalene concentrations were exceeded by soil samples 20211104-H7(POR)@ 9', 20211104-H7(POR)@ 12', 20211104-H7(POR)@ 15' with concentrations ranging from 0.321 mg/kg to 1.98 mg/kg;

All POR soil samples exceeded the COGCC Table 915-1 Clean-up Concentration (CC) for TPH with concentrations ranging from 2,870.9 mg/kg in soil sample 20211104-H7(POR)@ 15' to 5,342.9 mg/kg in soil sample 20211104-H7(POR)@ 9'. All POR soil samples exceeded the COGCC Table 915-1 CC for SAR with values ranging from 10.5 in soil sample 20211104-H7(POR)@ 15' to 21.9 in soil sample 20211104-H7(POR)@ 9'. Lastly, soil sample 20211104-H7(POR)@ 15' exceeded the COGCC CC for pH with value of 8.64. The laboratory analytical results are included in Enclosure B and summarized in Table 1.

Laboratory analytical results of the assessment soil samples collected on November 18, 19, and 22, 2021, indicate that all 20 samples exceeded the COGCC Table 915-1 PGSSLC (M) for barium. Barium concentrations ranged from 135 mg/kg in soil sample 20211118-H7 (SB-N) @ 20-22' bgs to 364 mg/kg in soil sample 20211122-H7 (SB-S) @

20-22' bgs. Soil samples 20211118-H7 (SB-POR) @ 10-12' and 20211118-H7 (SB-POR) @ 21-23' exceeded all M concentrations for parameters that were tested for under the approved reduced analytical suite. All other M and R exceedances are listed as follows:

- Benzene values were exceeded by soil samples 20211118-H7 (SB-POR) @ 10-12', 20211118-H7 (SB-POR) @ 21-23', 20211119-H7 (SB-W) @ 10-12', and 20211119-H7 (SB-W) @ 30.5-32' with values ranging from 0.00337 mg/kg to 1.46 mg/kg.
- Toluene values were exceeded by soil samples 20211118-H7 (SB-POR) @ 10-12', 20211118-H7 (SB-POR) @ 21-23', and 20211119-H7 (SB-W) @ 10-12' with values ranging from 9.99 mg/kg to 75.0 mg/kg.
- Ethylbenzene values were exceeded by soil samples 20211118-H7 (SB-POR) @ 10-12', 20211118-H7 (SB-POR) @ 21-23', and 20211119-H7 (SB-W) @ 10-12' with values ranging from 6.06 mg/kg to 11.2 mg/kg.
- Total xylenes values were exceeded by soil samples 20211118-H7 (SB-POR) @ 10-12', 20211118-H7 (SB-POR) @ 21-23', and 20211119-H7 (SB-W) @ 10-12' with values ranging from 6.06 mg/kg to 205 mg/kg.
- 1,2,4-trimethylbenzene values were exceeded by soil samples 20211118-H7 (SB-POR) @ 10-12', 20211118-H7 (SB-POR) @ 21-23', 20211118-H7 (SB-POR) @ 30-32', 20211118-H7 (SB-POR) @ 40-41.5', 20211118-H7 (SB-N) @ 20-22', 20211119-H7 (SB-W) @ 10-12', 20211119-H7 (SB-W) @ 20-21.5', and 20211119-H7 (SB-W) @ 30.5-32' with values ranging from 0.00950 mg/kg to 58.5 mg/kg.
- 1,3,5-trimethylbenzene values were exceeded by soil samples 20211118-H7 (SB-POR) @ 10-12', 20211118-H7 (SB-POR) @ 21-23', 20211118-H7 (SB-POR) @ 30-32', 20211118-H7 (SB-POR) @ 40-41.5', 20211118-H7 (SB-N) @ 20-22', 20211119-H7 (SB-W) @ 10-12', 20211119-H7 (SB-W) @ 20-21.5', and 20211119-H7 (SB-W) @ 30.5-32' with values ranging from 0.00960 mg/kg to 54.7 mg/kg.
- 1-methylnaphthalene values were exceeded by soil samples 20211118-H7 (SB-POR) @ 10-12', 20211118-H7 (SB-POR) @ 21-23', and 20211119-H7 (SB-W) @ 10-12' with values ranging from 1.01 mg/kg to 1.51 mg/kg.
- 2-methylnaphthalene values were exceeded by soil samples 20211118-H7 (SB-POR) @ 10-12', 20211118-H7 (SB-POR) @ 21-23', 20211118-H7 (SB-POR) @ 30-32', 20211119-H7 (SB-W) @ 10-12', and 20211119-H7 (SB-W) @ 10-12' with values ranging from 0.0399 mg/kg to 3.75 mg/kg.
- Naphthalene values were exceeded by soil samples 20211118-H7 (SB-POR) @ 10-12', 20211118-H7 (SB-POR) @ 21-23', 20211118-H7 (SB-POR) @ 30-32', and 20211119-H7 (SB-W) @ 10-12' with values ranging from 0.0226 mg/kg to 1.89 mg/kg.

Three of the 20 soil boring samples exceeded the COGCC Table 915-1 CC for TPH with concentration ranging from 4,248.8 mg/kg in soil sample 20211118-H7 (SB-POR) @ 21-23' to 7036 mg/kg in soil sample 20211119-H7 (SB-W) @ 10-12'. Nine of the 20 soil boring samples exceeded the COGCC Table 915-1 CC for SAR with values ranging from 6.10 in soil sample 20211118-H7 (SB-POR) @ 30-32' to 9.71 in soil sample 20211118-H7 (SB-POR) @ 10-12'. Lastly, 18 of the 20 soil boring samples exceeded the COGCC CC for pH with values ranging from 8.31 in soil sample 20211118-H7 (SB-POR) @ 40-41.5' to 9.46 in soil sample 20211119-H7 (SB-E) @ 20-22'. The laboratory analytical results are included in Enclosure B and summarized in Table 1.

CONCLUSIONS – H7 DUMPINE RELEASE

Based on the summary of analytical data provided for the dumpline release, WSP recommends that Caerus continue with delineation activities at the Site focused to the west of the separator to define the westernmost extent of the impacts. Prior to the continuation of the delineation activities, Caerus should request that the Director's condition of approval, listed in COGCC Initial Site Investigation and Remediation Workplan Document Number 402845415, concerning assessing potential pathway to groundwater be reviewed and a determination to continue this project using Residential Soil Screening Level Concentrations be taken into consideration based on information provided in the COGCC Initial Form 27 "Operator Comment" section. Furthermore, Caerus should request a further reduced analyte suite of TPH, BTEX, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, SAR and pH via a COGCC Supplemental Form 27 Site Investigation Work Plan under COGCC Document Number 402898845.

Please contact us at (970) 618-4514 or (970) 658-7025 if you have any questions regarding this report or require additional information.

NOTES:

ND - less than the stated reporting limit

BOLD - indicates result exceeds the COGCC concentration level

COGCC - Colorado Oil and Gas Conservation Commission

EC- electrical conductivity

mg/kg - milligrams per kilogram

mg/l - milligrams per liter

mmhos/cm - millimhos per centimeter

SAR - sodium adsorption ratio

SU - standard unit

TPH-ORO - total petroleum hydrocarbons- oil range organics

TPH-GRO - total petroleum hydrocarbons-gasoline range organics

TPH-DRO - total petroleum hydrocarbons-diesel range organics

TPH - combination of TPH-GRO, TPH-DRO, and TPH-ORO

NA - analyte not analyzed

ND - analyte not detected

R - risk based

MCL - maximum containment level (M)

CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.	1 Cp
ND	Not detected at the Reporting Limit (or MDL where applicable).	2 Tc
RDL	Reported Detection Limit.	3 Ss
Rec.	Recovery.	4 Cn
RPD	Relative Percent Difference.	5 Sr
SDG	Sample Delivery Group.	6 Qc
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.	7 Gi
U	Not detected at the Reporting Limit (or MDL where applicable).	8 Al
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.	9 Sc
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.	
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.	
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.	
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.	
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.	
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.	
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.	
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.	
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.	
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.	
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.	

Qualifier	Description
J	The identification of the analyte is acceptable; the reported value is an estimate.
J1	Surrogate recovery limits have been exceeded; values are outside upper control limits.
J2	Surrogate recovery limits have been exceeded; values are outside lower control limits.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
T8	Sample(s) received past/too close to holding time expiration.
V	The sample concentration is too high to evaluate accurate spike recoveries.

CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.	1 Cp
ND	Not detected at the Reporting Limit (or MDL where applicable).	2 Tc
RDL	Reported Detection Limit.	3 Ss
Rec.	Recovery.	4 Cn
RPD	Relative Percent Difference.	5 Sr
SDG	Sample Delivery Group.	6 Qc
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.	7 Gi
U	Not detected at the Reporting Limit (or MDL where applicable).	8 Al
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.	9 Sc
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.	
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.	
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.	
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.	
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.	
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.	
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.	
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.	
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.	
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.	
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.	

Qualifier	Description
J	The identification of the analyte is acceptable; the reported value is an estimate.
J1	Surrogate recovery limits have been exceeded; values are outside upper control limits.
J2	Surrogate recovery limits have been exceeded; values are outside lower control limits.
J3	The associated batch QC was outside the established quality control range for precision.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
P1	RPD value not applicable for sample concentrations less than 5 times the reporting limit.
T8	Sample(s) received past/too close to holding time expiration.

CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.	1 Cp
ND	Not detected at the Reporting Limit (or MDL where applicable).	2 Tc
RDL	Reported Detection Limit.	3 Ss
Rec.	Recovery.	4 Cn
RPD	Relative Percent Difference.	5 Sr
SDG	Sample Delivery Group.	6 Qc
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.	7 Gi
U	Not detected at the Reporting Limit (or MDL where applicable).	8 Al
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.	9 Sc
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.	
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.	
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.	
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.	
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.	
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.	
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.	
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.	
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.	
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.	
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.	

Qualifier	Description
B	The same analyte is found in the associated blank.
J	The identification of the analyte is acceptable; the reported value is an estimate.
J1	Surrogate recovery limits have been exceeded; values are outside upper control limits.
J3	The associated batch QC was outside the established quality control range for precision.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
P1	RPD value not applicable for sample concentrations less than 5 times the reporting limit.
T8	Sample(s) received past/too close to holding time expiration.

CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.	1 Cp
ND	Not detected at the Reporting Limit (or MDL where applicable).	2 Tc
RDL	Reported Detection Limit.	3 Ss
Rec.	Recovery.	4 Cn
RPD	Relative Percent Difference.	5 Sr
SDG	Sample Delivery Group.	6 Qc
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.	7 Gi
U	Not detected at the Reporting Limit (or MDL where applicable).	8 Al
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.	9 Sc
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.	
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.	
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.	
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.	
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.	
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.	
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.	
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.	
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.	
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.	
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.	

Qualifier

Description

B	The same analyte is found in the associated blank.
J	The identification of the analyte is acceptable; the reported value is an estimate.
J1	Surrogate recovery limits have been exceeded; values are outside upper control limits.
J3	The associated batch QC was outside the established quality control range for precision.
J5	The sample matrix interfered with the ability to make any accurate determination; spike value is high.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
P1	RPD value not applicable for sample concentrations less than 5 times the reporting limit.
T8	Sample(s) received past/too close to holding time expiration.
