Site Investigation and Remediation Workplan (Supplemental Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by COGCC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

SITE CONDITIONS

General soil type - USCS Classifications OH

Most Sensitive Adjacent Land Use Rangeland

Is domestic water well within 1/4 mile? No

Is surface water within 1/4 mile? No

Is groundwater less than 20 feet below ground surface? No

Other Potential Receptors within 1/4 mile

Ephemeral drainage lies approximately 335 feet to the east, but no live water is present nor was water present during the time of release. Nearest water well indicates a depth of 48 feet, suggesting that groundwater is at or near 48 feet.

INITIAL ACTION SUMMARY

Description of initial action or emergency response measures taken to abate, investigate, and/or remediate impacts associated with E&P Waste.

Initial actions consisted of fixing the wellhead rods that allowed the produced water to leak. Free liquids were recovered and soils that soaked up the other released fluids remain in place.

PROPOSED SAMPLING PLAN

Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

One (1) sample will be collected from the area around the wellheads and analyzed for COGCC Table 910-1

Proposed Groundwater Sampling

☐ Will groundwater samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Proposed Surface Water Sampling

☐ Will surface water samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Additional Investigative Actions

☐ Additional alternative investigative actions described in attached Site Investigation Plan (summary):

0 Number of surface water samples exceeding 915-1

If surface water is impacted, other agency notification may be required.

OTHER INVESTIGATION INFORMATION

☐ Were impacts to adjacent property or offsite impacts identified?

☒ Were background samples collected as part of this site investigation?

Three (3) background samples were collected from nearby undisturbed locations for arsenic and inorganics

☐ Was investigation derived waste (IDW) generated as part of this investigation?

Volume of solid waste (cubic yards) _____

Volume of liquid waste (barrels) _____

☐ Is further site investigation required?

REMEDIAL ACTION PLAN

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? No

SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

The rods within the wellhead that caused the spill has been replaced. Impacted soil will be sampled to determine if remediation is required

REMEDIAL ACTION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

Confirmation samples indicate soil meets COGCC Table 910-1 with the exception to inorganics. Foundation is requesting an allowance for the inorganic exceedances (see operator comments for more info).

REMEDATION COMPLETION SUMMARY

Is this a Final Closure Request for this Remediation Project? Yes _____

If YES:

☒ Compliant with Rule 913.h.(1).

☒ Compliant with Rule 913.h.(2).

☒ Compliant with Rule 913.h.(3).

Do all soils meet Table 915-1 standards? Yes _____

Does the previous reply indicate consideration of background concentrations? Yes _____

Does Groundwater meet Table 915-1 standards? Yes _____

Is additional groundwater monitoring to be conducted? _____

Operator shall comply with the COGCC 1000-Series Reclamation Requirements for all impacted and disturbed areas.

RECLAMATION PLAN

RECLAMATION PLANNING

Describe reclamation plan. Discuss existing and new grade recontouring; method and testing of compaction alleviation; and reseeding program, including location of new seed, seed mix and noxious weed prevention. Attach diagram or drawing.

If remediation is required, excavated soils around the wellhead will be backfilled to the current grade and compacted to allow for operations as this is a working pad.

Is the described reclamation complete? No _____

Does the reclamation described herein constitute interim or final reclamation of the Oil and Gas Location?

☐ Interim

☐ Final

Did the Surface Owner provide the seed mix? Yes _____

If YES, does the seed mix comply with local soil conservation district recommendations? Yes _____

Did the local soil conservation district provide the seed mix? Yes _____

OPERATOR COMMENT

Please forward onto John Heil

This Supplemental Form 27 is being submitted to request closure of the Foundation CSF 11C-14-4-104 produced water spill that occurred in 2014.

Confirmation samples collected indicated the soil complies with COGCC Table 910-1 with the exception to arsenic and inorganics. Arsenic values are below the surrounding background concentrations. Foundation is requesting allowance to the inorganic exceedances for the following reasons;

- The pad is still a working pad and the SAR values do not pose any environmental risk to surface water, groundwater or vegetation.
- Groundwater is estimated at 48 feet below ground surface and nearest groundwater well is located 4,100 feet away, eliminating the possibility of groundwater impacts.
- Surface water feature is a dry ephemeral drain 325 feet to the east and any SAR concentrations that would be a risk to the environment would have to travel across rugged terrain with varying slopes.
- SAR concentrations posing environmental risk to the vegetation would be addressed when the pad goes to final reclamation by either capping with a minimum of 3-feet of native soil and/or incorporating amendments to reduce the SAR concentration.

Foundation is requesting closure of the above spill and REM# 20082 under the previously implemented COGCC Table 910-1 rules as approved within the Initial Form 27 (Doc# 402755477).

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.

Description

	Based on a review of the information provided, it appears that no further action is necessary at this time and COGCC approves the closure request. Should conditions at the site indicate contaminant concentrations in soils exceeding COGCC standards, or, if groundwater is found to be significantly impacted, further investigation and/or remediation activities may be required at the site.
