### INITIAL ACTION SUMMARY

Description of initial action or emergency response measures taken to abate, investigate, and/or remediate impacts associated with E&P Waste.

Surface soil staining and oil were observed adjacent to the ground valve at the Schneider HD 11-179HXX wellhead during routine maintenance at the facility. The release, of unknown volume, was discovered on 2/8/21 (Spill Release Point ID 479338). A limited pothole excavation investigation was conducted on 2/16-17/21. One pothole was excavated to 16 feet below ground surface (bgs) at the Schneider HD 11-179HXX wellhead to define the vertical extent of potentially impacted soil. Three discrete soil samples were collected from the pothole at 10.5 feet, 14 feet, and 16 feet bgs for laboratory analysis. In addition, one background soil sample was collected from 8 feet bgs approximately 60 feet northwest of the pothole. The samples were collected and analyzed pursuant to COGCC Rule 915 for contaminants of concern listed in Table 915-1, following the general sample collection guidance in Rule 915.e.(2). Groundwater was not encountered. Gypsum was placed at the bottom of the pothole prior to backfilling with clean fill to promote biodegradation of residual petroleum in the soil and potential groundwater. On 2/8/21 and 2/16/21, approximately 20 cubic yards of hydrocarbon impacted soil was excavated utilizing hydrovac equipment for offsite disposal at the Pawnee Waste Landfill in Grover, Colorado in accordance with Rules 905 and 906.

### **GROUNDWATER MONITORING**

If groundwater has been impacted, describe proposed monitoring plan, including # of wells or sample points, monitoring schedule, analytical methods, points of compliance. Attach a groundwater monitoring location diagram.

On December 28, 2021, groundwater samples from all 5 wells were collected and delivered to Origins for BTEX, naphthalene, 1,2,4 trimethylbenzene, and 1,3,5 trimethylbenzene analysis. Concentrations of BTEX, naphthalene, 1,2,4 trimethylbenzene, 1,3,5 trimethylbenzene, were not reported at or above laboratory detection limits in any the samples collected from all 5 wells. Groundwater was encountered in the monitoring wells from 16.99 feet to 17.53 feet below the top of casing in each well and was calculated to flow to the east/southeast across the Site. Please refer to the attached Groundwater Data Submittal for a detailed summary of the December 28, 2021 groundwater sampling activities conducted at the Site.

The December 28, 2021 quarterly sampling event was the fourth consecutive quarter of groundwater analytical results below COGCC Table 915-1 concentration levels for BTEX, naphthalene, 1,2,3 trimethylbenzene, and 1,3,5 trimethylbenzene. Great Western requests no further action for Remediation Project #17320.

Following approval of closure, the 5 monitoring wells will be abandoned in accordance with State standards.
