COMMENTS:

This well started mitigation in July of 2021. The pre-mitigation bradenhead test conducted 7/16/2021 (Form 17 doc# 402773119) reported 369 PSI and flowrate of 0 on 7/26/2021. Compared to nearby groundwater well water quality measurements, analysis does not definitively suggest aquifer communication. Following the previous 6 months of bradenhead blowdown mitigation, BCEL has seen progress with this well's bradenhead but believes that it would benefit from an additional round of 6 month blowdown mitigation. This progress can be seen in the blowdown trends (charts attached) and bradenhead test (Form 17 doc# 402927202) with 72 PSI. BCEL is confident in the efficacy of this mitigation program and is requesting that this mitigation plan be extended for an additional 6 months to further reduce bradenhead pressure during buildup.
