SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

Approximately 900 CYDS of impacted material was removed and transported to Buffalo Ridge Landfill in Keenesburg, Colorado for disposal under PDC waste manifests. The excavation measured approximately 62 ft by 39 ft by 10 feet bgs. Excavation oversight soil screening and sampling performed by LTE; however, due to an internal oversight, no data was submitted to the COGCC. Groundwater was encountered in the excavation.

REMEDIAL ACTION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

Enhanced fluid recovery (EFR) and air sparge (AS) was initiated during the third quarter 2018 and will continue as the selected remediation strategy through the second quarter 2022.

GROUNDWATER MONITORING

If groundwater has been impacted, describe proposed monitoring plan, including # of wells or sample points, monitoring schedule, analytical methods, points of compliance. Attach a groundwater monitoring location diagram.

Groundwater monitoring will continue on a semi-annual basis at the 11 site monitoring wells (MW02-R, MW03-R, MW05-R, MW07, MW10-R, MW13, MW17-R, MW19, MW21, MW23, and MW24). Groundwater samples will be submitted for laboratory analysis of benzene, toluene, ethylbenzene, and total xylenes (BTEX), naphthalene, 1,2,4-trimethylbenzene, and 1,3,5-trimethylbenzene by EPA Method 8260B in accordance with Table 915-1. In addition, per the condition of approval (COA), issued in the approved Supplemental Form 27 (Document No. 402738570), site-specific inorganic parameters, including total dissolved solids (TDS), chloride, and sulfate, were evaluated site wide during the fourth quarter 2021. Analytical results indicated inorganic parameters are in compliance with the applicable COGCC Table 915-1 regulatory standards or within 1.25x the background concentration of the up-gradient well MW19. Additionally, organic compound concentrations were in exceedance of the applicable COGCC Table 915-1 regulatory standards in monitoring wells MW05-R, MW21, and MW23. Organic compound concentrations were in compliance with the applicable regulatory standards in the remaining eight monitoring well locations.

OPERATOR COMMENT

This Supplemental Form 27 was submitted to summarize semi-annual groundwater monitoring and monthly remediation activities at the former Dechant 1-31A location. Based on the results of the inorganic parameters collected during the fourth quarter 2021 groundwater monitoring event, PDC is requesting that analysis of TDS, and chloride and sulfate anions are removed from the semi-annual sampling plan.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.
