COGCC Rules (check all that apply)

1101. Installation and Reclamation 1102. Operations, Maintenance, and Repair 1103. Abandonment

Comment: COGCC Inspector was on location 12/22/2021 and 1/26/2022. During reclamation activities a historical release of an unknown volume was discovered at the previously decommissioned Buffalo Gardens U #13-4J Production Facility. Previously abandoned flowlines (dump and process lines) were uncovered during excavation work at the site; flowlines ranged in sizes between 2"-4" OD. These on location flowlines were removed by Oxy contract personnel (confirmed via inspection 12/22/21). No flowlines (risers or ends) were observed during inspection on 1/26/2022. Reclamation, excavation and remediation work remains in progress.

During excavation work on site (2) historically abandoned flowlines (2" carbon steel yellow jacket pipe) were discovered; these lines (segments) are presumed to be associated with historical operations of area wells (not owned/ operated by Oxy) plugged and abandoned (1999). No pressure (gas/ fluid) was identified with the flowlines. The lines trend in a S-SE direction from the facility excavation area to the south edge of location. (1) flowline was removed in entirety; the second flowline was removed to the south edge of location approximately 10' north of a property fenceline. The cut end of this flowline was sealed (using cement) and capped (with a collar and bullplug). This work was completed on 1/20/2022. Confirmation photos were provided to COGCC on 1/24/22.

COGCC Comments

Comment	User	Date
As outlined on COGCC Initial Form 19 Doc #402897368 received on 12/15/2021: On December 13, 2021, a historical release of an unknown volume was discovered during reclamation activities at the previously decommissioned Buffalo Gardens U #13-4J Production Facility. Site assessment activities are ongoing and will be summarized in a forthcoming Supplemental Form 19 Spill/Release Report.	maclarej	01/27/2022
