BRADENHEAD MITIGATION PLAN

Magpie Operating, Inc. (Magpie), has drafted this plan in accordance with Rule 419.b.(4).C.

This well underwent its annual 2021 bradenhead test on August 3, 2021, reported on Form 17, Document # 402779731. The surface casing pressure was at 50 psi. All casings held their pressures during the test.

Magpie will continue to monitor the bradenhead pressure regularly.

Magpie will blow down the bradenhead pressure to the gas sales line as necessary to mitigate high pressures.
