CORRECTIVE ACTIONS:

3 CA# 159438

Corrective Action: Install or repair required BMPs Date: 03/31/2022

Response: CA COMPLETED Date of Completion: 02/02/2022

Operator Comment: Road and crossing are maintained as needed. Runoff water noted in inspection photos is coming from drainage areas above the water crossing is laden with naturally occurring sediment that is coming from areas above the crossing. The road and crossing are constructed in alluvial deposits with a high rock content which helps to stabilize the crossing and prevents down-cutting by occasional traffic. The crossing and occasional traffic are not contributing a significant source of sediment to the snow melt runoff that is running in this drainage.
