## Site Investigation and Remediation Workplan (Supplemental Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by COGCC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

### DESCRIPTION OF IMPACT

Impacted?	Impacted Media	Extent of Impact	How Determined
Yes	SOILS	Approximately 25,000 square feet	Soil samples

### INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

A COGCC inspection on 10/27/2021 and identified two off location areas with stressed vegetation that are likely related to historical spills.

### PROPOSED SAMPLING PLAN

#### Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

On November 9, 2021, confirmation soil samples were collected from the two areas with stressed vegetation. Three samples (SS1-1 through SS3-3) were collected from the eastern area and three samples (SS4-1 through SS6-1) were collected from the western area. One background sample (BG1-1) was collected away from the impacted areas and potential oil and gas operations to characterize natural soil conditions. All samples were collected from ground surface to 1 foot below ground surface. The samples were transported with a completed chain-of-custody form to Summit Scientific in Golden, Colorado, for analysis of electrical conductivity (EC), sodium adsorption ratio (SAR), and pH. Samples SS1-1 through SS1-6 were also analyzed for hot water soluble boron.

## **OPERATOR COMMENT**

Gypsum has been ordered from a supplier in Fort Collins and transportation to the site is currently being arranged. Reclamation activities will begin this spring as soon as possible once the gypsum is delivered to the site and a work crew is available. Work with heavy equipment in this area is difficult to schedule and is dependent on contractor availability.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.
