Narrative

CASE NARRATIVE

Client: Evergreen Natural Resources LLC

Project: Soil Suite

Report Number: 280-155400-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 11/10/2021. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 2.8°C

Please note, only 4 containers were received for Angel 44-7 Native Lat. 37.09432 Long. -104.59721 (280-155400-1), therefore, the following analyses could not be performed 7196A Hexavalent Chromium, 8270D SIM, and 8015B DRO.

GC/MS VOA, 8260B

The method 8260B MS/MSD could not be performed for this batch, due to insufficient sample volume. Method precision and accuracy have been verified by the acceptable LCS/LCSD analysis data.

No other anomalies were observed.

GC/MS Semivolatiles, 8270C SIM

Surrogate Nitrobenzene-d5 for method 8270C SIM was recovered outside the QC limits in the Method Blank. All other surrogate recoveries were within QC limits. EPA surrogate guidelines for GC/MS SVOA is that two of the three surrogates for each fraction must meet acceptance criteria. The third surrogate must have a recovery of ten percent or greater. As Method Blank analysis met these criteria and the LCS and samples were within control limits, corrective action is deemed unnecessary.

The method 8270C SIM MS/MSD was performed on sample Angel 44-7 Composite Lat. 37.09432 Long. -104.59721 and was within control limits.

No other anomalies were observed.

GC Volatiles, SW846 8015B

The Method 8015B MS/MSD was performed on sample from another client and/or lot and was outside control limits.

The method 8015B SIM MS/MSD was performed on sample Angel 44-7 Composite Lat. 37.09432 Long. -104.59721 and was within control limits.

No other anomalies were observed.

GC Semivolatiles, SW846 8015B

The method 8015B SIM MS/MSD was performed on sample Angel 44-7 Composite Lat. 37.09432 Long. -104.59721 and was outside control limits.

Method 8015B_DRO: The peak profile present in this sample Angel 44-7 Composite Lat. 37.09432 Long. -104.59721 is atypical of a hydrocarbon pattern and consists of about a dozen discrete peaks

No other anomalies were observed.

Total Metals SW846 6010B, 6020 and 7471A

The Method 20B sample duplicate was performed on sample Angel 44-7 Composite Lat. 37.09432 Long. -104.59721 was outside control limits.

The Method 6010B MS/MSD performed on sample Angel 44-7 Composite Lat. 37.09432 Long. -104.59721 and Angel 44-7 Native Lat. 37.09432 Long. -104.59721 was outside control limits for Boron.

The Method 6020 MS/MSD performed on sample Angel 44-7 Composite Lat. 37.09432 Long. -104.59721 was outside control limits for Copper

The accuracy and precision of the Zinc MS/MSD performed on sample Angel 44-7 Composite Lat. 37.09432 Long. -104.59721 and Angel 44-7 Native Lat. 37.09432 Long. -104.59721 could not be reliably evaluated, as the concentrations present in the parent sample were 4 times greater than the matrix spike concentration. The acceptable LCS analysis data indicated that the analytical system was operating within control; therefore, corrective action is deemed unnecessary.

No other anomalies were observed.

General Chemistry

This analysis is normally performed in the field and has a method-defined holding time of 15 minutes. The samples has been qualified with the "HF" flag to indicate analysis was performed in the laboratory outside the 15 minute timeframe.

All MS/MSD were performed on sample from another client and/or lot and were within control limits.

The specific conductance and percent moisture sample duplicates were performed on sample Angel 44-7 Native Lat. 37.09432 Long. -104.59721 and were within control limits.

All other sample duplicates were performed on sample from another client and/or lot and were within control limits.

No other anomalies were observed.
