Comment:		<p>COGCC inspector met with CPRO contract personnel on location. An open excavation was observed near the gas gathering riser assembly; crews were in the process of removing historically impacted soils from location. (2) wells previously serviced by the facility have been plugged and abandoned (Oster 1, Oster 43-28); COGCC form 42 notices of start of plugging operations were received October 2021. The facility is being decommissioned; tanks/ equipment and on location flowlines (including Oster 1 WH flowline, dump & process lines) have been removed. COGCC form 42 flowline abandonment completed doc #402895128 was received 12/10/2021. The off location flowline previously servicing the Oster 43-28 has been removed with the exception of an approximate 60' section of exposed/ above ground flowline that crosses the Platte Valley Canal adjacent to/ west of location. Excavation and remediation work in response to the historical release is in process.</p>

<p>As outlined on COGCC form 19 spill report Doc #402965302 received on 02/24/2022: While performing site reclamation activities, legacy soil impacts were uncovered. It appears that damage to the flowlines in the past may have caused a discharge of fluids, resulting in soil impacts. The entire site is being decommissioned and will be reclaimed. More details will follow on a supplemental F27 submittal pending investigation.</p>	maclarej	03/01/2022
