COMMENTS:

A pre-stim Bradenhead test was conducted on 2/8/2022 (Form 17 doc # 402957510) indicating 400 psi initial pressure and a slight gas whisper at the end of the test. After consulting with COGCC staff, Extraction conducted a series of seven daily blowdowns in an effort to evacuate any gas entrained in the mud behind surface pipe. Following these blowdowns the Bradenhead was then left shut in for a period no less than 7 days before conducting a follow up Bradenhead test (Form 17 # 402971802). This test yielded an initial pressure of 15 psi that blew down to 0 psi in under 30 seconds and left the surface casing annulus static with no gas whisper. Review of the Bradenhead gas sample indicates it is thermogenic. Given the passing test, Extraction believes the pressure was due to entrained gas which has been sufficiently evacuated and plans to continue with stimulation as planned per conversations with COGCC staff.
