Site Investigation and Remediation Workplan (Supplemental Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by COGCC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

A site investigation will be conducted pursuant to COGCC rule 911 at the Hickert 41C-18349 tank battery location. See attachment for soil sample and field screening locations.

PROPOSED SAMPLING PLAN

Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

Grab confirmation soil samples will be collected from beneath the separator (vertical inside meter shed), potentially from beneath the connection at the meter shed, beneath the AST, and from the sidewalls and floor of the pit. Soil samples will be analyzed by a certified laboratory for TPH (total volatile [C6-C10] and extractable [C10-C36] hydrocarbons), organic compounds in soil per COGCC Table 915-1, and EC, SAR, pH, and boron. All samples will be analyzed by a certified laboratory using approved COGCC laboratory analysis methods. See attachment for soil sample and field screening locations.

Proposed Groundwater Sampling

☒ Will groundwater samples be collected as part of this investigation? (Number, analyses, and locations of samples):

If groundwater is encountered during the site investigation a grab groundwater sample will be collected and analyzed for all organic compounds per COGCC Table 915-1.

Proposed Surface Water Sampling

☐ Will surface water samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Additional Investigative Actions

☐ Additional alternative investigative actions described in attached Site Investigation Plan (summary):

Visual inspection of the tank battery area will occur during abandonment activities. Field personnel will field screen all disturbed areas using a photoionization detector to determine if laboratory confirmation soil sampling is required. The COGCC Tank Battery Checklist will be utilized and filled out during the abandonment process. A photolog will be submitted in the subsequent form 27.

OPERATOR COMMENT

For Simplicity in reporting, we request to please combine this remediation project with project number 16850 for the Hickert 41C where the remainder of the remediation progress has been documented for the wellhead and facility areas. Sampling results are attached as documentation to support closure. Gypsum as applied to amend the soil for low calcium as shown by the slight elevation in SAR and local top soil was spread across the top foot while re-contouring. Reclamation will be completed in accordance with COGCC 1000 Series Rules once the remediation project had been closed.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.
