COGCC Comments

Comment	User	Date
At time of inspection master valve, and flowline valves were in the open position. Casing valves were in the shut position. During inspection master valve, and flowline valves were put in the shut position. Trash is present on location. Unable to access tanks due to weed growth on location to check if tanks contain production fluids.	medinaj	03/03/2022
Because P3 is not actively managing any of its Colorado Wells or Locations there is a direct threat to public health, safety and welfare, including the environment and wildlife resources. Therefore, the COGCC will undertake steps to, at a minimum, shut-in all of P3's wells and lock-out/tag-out P3's flowlines. COGCC may take additional actions to protect public health, safety and welfare, including the environment and wildlife resources, without providing advanced notice.
