COGCC Comments

Comment	User	Date
At time of inspection master valve was in the shut position. Flowline valves appeared to be in close position. One casing valve appears to be siezed in the open position. Bradenhead valve is in the closed position. Tanks appeared to be empty, some production fluid in open top tank.	medinaj	03/03/2022
Because P3 is not actively managing any of its Colorado Wells or Locations there is a direct threat to public health, safety and welfare, including the environment and wildlife resources. Therefore, the COGCC will undertake steps to, at a minimum, shut-in all of P3's wells and lock-out/tag-out P3's flowlines. COGCC may take additional actions to protect public health, safety and welfare, including the environment and wildlife resources, without providing advanced notice.
