**General Comment:**Spill Inspection

Inspector was contacted at 0921 hrs on 3/13/2022 about a spill at the treater at this location, possibly a flowline leak. Wind had blown a mist of oil into the nearby winter wheat field to the south, the fallow crop field to the north and some oil mist on the banks of nearby produced water pits. The landowner had been contacted and the Washington County LGD would be on Monday. Greater than 1 bbl outside of containment was estimated so the inspector told them to submit a Form 19I. Inspector went to the location that same day where the spill was being contained. A mix of oil and produced water was spill inside and outside of the earth berms at the treater. The earth berms breached on the NE corner and fluids ran down the side of the first produced water pit. There was some oil in the first two pits. Three geese were walking around the banks of the furthest east pit. Inspector did not see any injured birds and went to both wellheads to also look for them. Inspector left message with COGCC EPS on 3/13/2022. See attached photos.
