Flowlines in Area

Surface Owner preference for flowline management. (COGCC requires removal for onsite flowlines. CPR prefers removal for offsite flowlines as well but is willing to discuss options for abandoning in place with a formal agreement with the Surface Owner.)

Flowline for Andersont Trust #2-A is fiberglass and to remove it would require digging up line throughout the 2 flood irrigated fields. Surface owner requests no disturbance to the fields and therefore requests the flowline be abandoned in place per COGCC rules and regulations.
