Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

At 1030 hours on 03/16/2022, a condensate release occurred on a DCP gathering line in the dry ditch on the west side of County Road (CR) 17 near the intersection with CR 34. Prior to the release, the line had been isolated and idle for approximately 3 years. A producer needed to flow their well to maintain a lease and worked with DCP Operations to turn on the wells. About 30 minutes after the line had been filled with condensate, an integrity breach was discovered in the line resulting in a spill that traveled approximately 300 ft down the dry ditch to the northwest. Upon discovery, DCP immediately shut off the line and began the cleanup process on the same day. Multiple vacuum trucks were dispatched to remove contained liquid condensate. Soil excavation and delineation activities are scheduled for 3/17/22 pending the weather. Results of the excavation will be provided in a 10-day Form 19 Supplemental report due to COGCC by 3/27/22.

No	Rule 912.b.(1).H: Spill or Release resulting in vaporized hydrocarbon mists that leave the Oil and Gas Location or Off-Location Flowline right of way from an Oil and Gas Location and impacts or threatens to impact off-location property.

No	Rule 912.b.(1).I: A Release of natural gas that results in an accumulation of soil gas or gas seeps.
No	Rule 912.b.(1).J: A Release that results in natural gas in Groundwater.

OPERATOR COMMENTS:

Vacuum trucks were immediately dispatched to the site within a few hours of discovering the release to remove liquid condensate and shallow impacted soil from the ground surface. An additional investigation to delineate the soil impacts with laboratory confirmation samples will be completed on March 21, 2022, weather permitting. Impacted soils will be delineated by visual observation, PID field screening, and laboratory confirmation sampling. Because the release occurred on a condensate gathering line, DCP requests COGCC approval to limit the site-specific sampling and analysis plan to Table 915-1 VOCs, TPH, and any PAHs that are detected in the most impacted source area sample. Results of the investigation, including laboratory results and a photographic documentation log, will be submitted to COGCC in a subsequent Form 19-S within 10 days of the date of discovery by 3/27/22..

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.
