COMMENTS:

TEP Rocky Mountain LLC (TEP) is reporting that the bradenhead on the GM 215-33 has been connected to the sales separator as part of a Pressure Management Plan. On September 21, 2021, the GM 215-33 had a bradenhead pressure of 239 psi. This well has a surface casing depth of 668' (TVD) of giving the well a calculated threshold pressure of 200 psi. TEP performed a blowdown test and submitted the test results via a Form 17 on September 22, 2021. A copy of the Form 17 is included in the "Related Forms" section. TEP monitored the bradenhead pressure after performing the test and determined that the bradenhead pressure continued to build and sustain pressures above the calculated threshold pressure. On November 17, 2021, TEP connected the bradenhead to the sales separator as part of a Pressure Management Plan for this well. The average sales line pressure for this well is 105 psi. The bradenhead was connected to the sales line at the wellhead with steel pipe and a check valve. A typical diagram is attached which depicts the bradenhead connection.
