COMMENTS:

TEP Rocky Mountain LLC (TEP) is reporting that the bradenhead on the GV 22-29 will be connected to the sales line following COGCC verbal approval to increase the bradenhead threshold pressure to 120 psi. This well has a surface casing depth (TVD) of 308' which equates to a COGCC calculated bradenhead threshold pressure of 92 psi. Due to the low calculated bradenhead threshold pressure and an average sales line pressure of 115 psi that exceeds the bradenhead threshold pressure, TEP Engineering staff requested a bradenhead threshold pressure increase to 120 psi via email communications with COGCC's Aaron Katz. The requested bradenhead threshold pressure increase is approximately 5 psi greater than the average sales line pressure and would allow TEP to effectively manage the bradenhead pressure by connecting the bradenhead to the sales line. After performing the requested diagnostic testing, the COGCC approved TEP's request to increase the bradenhead threshold pressure to 120 psi and to connect the bradenhead to the sales line on 3/15/2022, via email. The bradenhead is scheduled to be connected to the sales line on 3/17/2022 with steel pipe and a check valve. A copy of the email granting the approval of the threshold pressure increase and the connection of the bradenhead to the sales line is attached for reference. A diagram has also been attached that depicts the bradenhead connection to the sales line. Additionally, a 6-month plot with the well's average line pressure is included.
