COMMENTS:

We would like to request an alternative MIT test, and start the process to plug this well. There is no risk that this well has lost its mechanical integrity and therefore we feel that an MIT is unnecessary in this situation for the following reasons. The bradenhead pressure is zero and the casing pressure is positive. These are all shallow wells located in the Niobrara reservoir which is a low-pressure reservoir, and this well will be plugged by the end of 2023. See attachment for additional details. Phase one of our plugging process (included in attachment) to include setting a CIBP to commence the first week in April 2022.
