COMMENTS:

In accordance with Rule 903c(B)(i-iii):
Noble requests to combust/flare gas produced from the coil out process of this well for a period of 48-hours, as necessary, prior to flowback. Combusting this gas is the best method to protect and minimize adverse impacts to public health, safety, welfare, and the environment.
Flaring volume during this period is anticipated to be to be 200mcf-250mcf/day
The well will be connected to a permanent facility prior to the first sale.
The presence of H2S is not anticipated at this site.

GAS CAPTURE

VENTING AND FLARING:

Operation type: Flaring Operational phase requiring venting/flaring: Completions

Reason for venting/flaring: Safety

Describe Other reason for venting/flaring:

In accordance with Rule 903c(B)(i-iii):
Noble requests to combust/flare gas produced from the coil out process of this well for a period of 48-hours, as necessary, prior to

flowback. Combusting this gas is the best method to protect and minimize adverse impacts to public health, safety, welfare, and the environment.

Flaring volume during this period is anticipated to be 200mcf-250mcf/day

The well will be connected to a permanent facility prior to the first sale.

The presence of H₂S is not anticipated at this site.

Describe why venting or flaring is necessary. If reporting per Rule 903.b.(2), 903.c.(3).C, or 903.d.(2), include the explanation, rationale, and cause of the event:

Intermittent Flaring during Coil Out Activities as part of routine operations

Describe how the operation will protect and minimize adverse impacts to public health, safety, welfare, the environment, and wildlife resources. If reporting per Rule 903.d.(2), include BMPs used to minimize venting on the BMP Tab:

Flaring in place of no control/venting to atmosphere reduces the quantity of criteria pollutants released into the air, as well as disperses the particles so ground level impacts are negligible.

Total volume of gas vented or flared: 250 mcf ☒ estimated ☐ measured

Total duration of emission event: 48 hours ☐ consecutive ☒ cumulative

Submit a single representative gas analysis via Form 43 to create a Sample Site Facility ID# for this Location. Reference the Form 43 document number on the Related Forms tab.

☐ Intentional release of H₂S gas due to Upset Condition or malfunction.

☐ Intent to temporarily abandon well with potential H₂S concentration >100 ppm.

Data Fields in this section are intended to document Sample and Location Data associated with the collection of a Gas Sample that is submitted for Laboratory Analysis.

Gas Analysis Report must be attached.
