Scott,
There are no historic spills associated with the facility and it will be no problem to comply with these requirements.

I will submit my Form 27 Workplan to the COGCC this afternoon outlining the requirements set forth below.

Thanks for the response.

Regards,
Jason

Thanks Jason,
First, we will want to know if there is any spill history associated with the site. Assuming not, then what we will need are copies of your independent environmental engineers closure report, which generally include the results of their field screenings, soil sampling locations, and observations. We basically will want to see the results of the testing done to attain compliance with the series 900 Rules, and more specifically Rule 915.e.2 as you note in your e-mail. Then, should

the work identify any contamination, we will want to discuss the significance (or lack thereof) of any spill and how it will be mitigated as this site is in close proximity to our shallow wells. If there are monitor wells associated with the site, we will also want to see any test history from those wells.

Unless there is a spill history associated with the site, we normally will not require anything more than that now required by COGCC above.

Give me a call if you have any questions..

Good morning, Scott.

I'll need to submit my paperwork to the State this afternoon. Can you please respond with your requirements so I can include them in my submittal?

Thanks,
Jason

Importance: High

Morning Bandon,
Please see below. Have you heard back from your consultant yet? I need to get my forms submitted to the State before we can do any work and I'm coming real close to my deadline.

Thanks,
Jason

Morning Brandon,
Hope all is well. I'm getting close to my deadline for submitting my Workplan to the COGCC. Just checking in. Have you heard anything from your consultant regarding Great Western's upcoming abandonment of our HSR Eppinger 6-1 facility?

Thanks,
Jason

Subject: Great Western Operating Company - HSR Eppinger 6-1 Facility Closure

Morning Brian,
Great Western plans to conduct closure of our HSR Eppinger 6-1 wellhead, tank battery, and associated on-location flowline. The tank battery includes one above ground storage tank, one partially buried produced water vessel, one separator, and metering equipment. Plugging and abandonment (P&A) of the wellhead is scheduled to commence on 4/14/2022 and be completed by 4/18/2022. Tank battery closure, wellhead cut and cap, and flowline removal activities are planned to commence on 4/25/2022 and be completed by 6/24/2022. Great Western's third party environmental consultant will conduct site investigation activities, field screening, and confirmation soil sampling activities during closure in accordance with COGCC 900 Series Rules. Discrete soil samples will be collected and analyzed pursuant to Rule 915 following the general sample collection guidance in Rule 915.e.(2). All waste generated during the closure activities will be managed and disposed of at a licensed disposal facility in accordance with Rules 905 and 906.

According to the COGCC's Webmap, the Site is located within a GUDI and Type III Wells – Generalized Internal Buffer, which triggers the requirement to consult with the PWS administrator (East Cherry Creek Valley) prior to conducting work.

I attached a KMZ file for location reference and the legals are as follows:

County: Adams

Wellhead Lat/Longs: 39.996494 / -104.727725

Tank Battery Lat/Long: 39.996510 / -104.728071

Legal: SENW S1 1S 66W

I'm available any time today to discuss over the phone, or if email is easier, that works too.

Thanks,
Jason
