The Pronghorn 21-24-17HNB separator over pressured, blowing the rupture disc, and resulting in approximately 9 bbls of oil to mist to the southwest across the pad and into the neighboring property. The impacted soil and vegetation will be removed and hauled to a COGCC approved disposal facility. Confirmation soil samples will be collected and submitted for laboratory analysis of TPH (C6-C36), organics in soil, and inorganics in soil in compliance with COGCC Table 915-1. A waste characterization sample for metals will also be submitted. Background soil samples for inorganics and/or metals will be collected and submitted, as needed. Based on the surficial nature of the release, and immediate clean-up actions taken, Bonanza requests utilizing COGCC Table 915-1 residential soil screening levels to confirm laboratory compliance with the remediation. Clean-up documentation and analytical results will be provided on a supplemental report.
