COMMENTS:

This location is connected to a gas sales line, however the line is currently out of service. KPK is unaware of when the gas gathering operator will bring the line back into service.
This facility has been and will continue to be operated in full compliance pursuant to the applicable requirements of Colorado's Air Quality Control Commission's Regulation No. 3 and Regulation No. 7, including Sections XII & XVII.

GAS CAPTURE

VENTING AND FLARING:

Operation type: Flaring _____ Operational phase requiring venting/flaring: Production
Reason for venting/flaring: Gathering Line Not Accessible
Describe Other reason for venting/flaring:

The HEIN 1 location is neither venting nor flaring gas, all gas is used on site and any residual gas is routed to an approved combustion device after separation.

Describe why venting or flaring is necessary. If reporting per Rule 903.b.(2), 903.c.(3).C, or 903.d.(2), include the explanation, rationale, and cause of the event:

This location is connected to a gas sales line, however the line is currently out of service. Natural gas production is minimal. KP KAUFFMAN COMPANY INC is first utilizing the produced natural gas to run production equipment onsite. KP KAUFFMAN COMPANY INC., HEIN 1's produced gas is processed through an adequately sized separator, combustion of tank vapor after adequate separation is authorized by CDPHE-APCD. This location has an APEN with CDPHE 15-123-09056.

Describe how the operation will protect and minimize adverse impacts to public health, safety, welfare, the environment, and wildlife resources. If reporting per Rule 903.d.(2), include BMPs used to minimize venting on the BMP Tab:

The HEIN 1 produces insufficient saleable quantity or quality gas to make such a long lateral pipeline to connect to a gas gathering system feasible or practicable. The nearest gas gathering line is approximately .67 miles away. Natural gas is utilized onsite to run production equipment. It is not vented.

Total volume of gas vented or flared: 4 mcf estimated measured
Total duration of emission event: 720 hours consecutive cumulative

Submit a single representative gas analysis via Form 43 to create a Sample Site Facility ID# for this Location. Reference the Form 43 document number on the Related Forms tab.

Sample Site Facility ID#: _____

GAS CAPTURE PLAN

Describe the plan to connect to a gathering line or beneficially use the gas; include anticipated timeline:

For the reasons stated above, connection to a gathering line is not feasible. The minimal natural gas produced is beneficially used onsite to run production equipment.

A Gas Capture Plan that meets the requirements of Rule 903.e is attached.
