                        **Rio Blanco County, Colorado**

Dear Mr. Janicek:

WSP USA Inc. (WSP), on behalf of Caerus Oil and Gas LLC (Caerus), conducted initial assessment soil sampling activities associated with the December 17, 2021, produced water release discovered at the YCF 35-33-1 (Facility ID: 316660) (Site). This release occurred while the field was being shut in and tanks were being emptied. As a result, residual fluids within the above ground off-load line from the tank to the pump froze, which expanded the pipe threads apart at the “Y” to the strainer and pump. This caused an unknown amount of produced water to be released. A Caerus operator discovered the produced water within the metal containment and confined to the working surface. These initial assessment activities were completed to characterize release area. All initial spill response activities associated with the off-load line leak can be referenced under Colorado Oil and Gas Conservation Commission (COGCC) Spill/Release Point ID 481405. This document serves as a report of work completed (ROWC) under Supplemental Form 27 Document Number (DN) 403044040 for the above-mentioned release. The Site is in the Yellow Creek Field area of operation in Rio Blanco County, Colorado (Figure 1).

## **SOIL SAMPLING ACTIVITIES – YCF 35-33-1 LOADOUT LINE LEAK**

On April 19, 2022, a WSP geologist completed initial assessment and background soil sampling activities associated with the off-load line release at the Site. Empire Locating Services LLC (ELS) of Grand Junction, Colorado was contracted to assist in the collection of soil samples from the pad surface. Using a hand auger and hydro-vacuum truck, four hydro-vacuum potholes were advanced along the southern exterior of the metal containment to profile the spill path. A total of eight point of compliance (POC) soil samples were collected at one foot and two feet below ground surface (bgs) from each pothole. The soil was characterized by visually inspecting the confirmation soil samples and field screening the soil using a photoionization detector (PID) to monitor for the presence or absence of volatile organic vapors. Each sample was collected in clean laboratory prepared containers and submitted to Pace Analytical (Pace) of Mount Juliet, Tennessee for analysis of constituents listed in COGCC Table 915-1.

In addition, four representative background soil samples were collected in each cardinal direction outside of the pad disturbance from non-impacted native soil per COGCC Rule 915.e(2). Background soils samples were collected between 0.5 feet and 1-foot bgs. Each background soil sample was collected in clean laboratory prepared containers and submitted to Pace of Mount Juliet, Tennessee for arsenic, sodium absorption ration (SAR), electrical conductivity (EC), pH, and boron with the exception of the western background sample which was submitted for analysis of all constituents listed in COGCC Table 915-1. The laboratory analytical report for the soils samples is provided in Enclosure A. The release area, confirmation and background soil sample locations are illustrated on the enclosed Figure 2.

## ANALYTICAL RESULTS – YCF 35-33-1 LOADOUT LINE LEAK

Laboratory analytical results of the eight POC pothole soil samples collected on April 19, 2022, indicate exceedances of the COGCC Table 915-1 Protection of Ground Water Soil Screening Level Concentrations (PGSSLC) maximum containment level (M) for arsenic, barium, benzene, toluene, ethylbenzene, total xylenes (BTEX) and exceeded the COGCC Table 915-1 PGSSLC risk based (R) for 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, 1-methylnaphthalene, 2-methylnaphthalene, and naphthalene. The R and M exceedances are summarized below:

- Arsenic concentrations were exceeded by all eight POC soil samples collected with concentrations ranging from 2.36 milligrams per kilogram (mg/kg) in soil sample 20220419-YCF 35-33-1(POCC) to 6.13 mg/kg in soil sample 20220419-YCF 35-33-1(POCD);
- Barium concentrations were exceeded by soil samples 20220419-YCF 35-33-1(POCA), 20220419-YCF 35-33-1(POCA)@2', 20220419-YCF 35-33-1(POCB), 20220419-YCF 35-33-1(POCB)@2', 20220419-YCF 35-33-1(POCC)@2', 20220419-YCF 35-33-1(POCD), and 20220419-YCF 35-33-1(POCD)@2' with concentrations ranging from 170 mg/kg to 408 mg/kg;
- Benzene concentrations were exceeded by soil samples 20220419-YCF 35-33-1(POCA), 20220419-YCF 35-33-1(POCA)@2', and 20220419-YCF 35-33-1(POCD) with concentrations ranging from 0.129 mg/kg to 0.931 mg/kg;
- Toluene concentrations were exceeded by soil samples 20220419-YCF 35-33-1(POCA), 20220419-YCF 35-33-1(POCA)@2', and 20220419-YCF 35-33-1(POCD) with concentrations ranging from 8.28 mg/kg to 90.4 mg/kg;
- Ethylbenzene concentrations were exceeded by soil samples 20220419-YCF 35-33-1(POCA), 20220419-YCF 35-33-1(POCA)@2', and 20220419-YCF 35-33-1(POCD) with concentrations ranging from 2.73 mg/kg to 12.9 mg/kg;
- Total Xylenes concentrations were exceeded by soil samples 20220419-YCF 35-33-1(POCA), 20220419-YCF 35-33-1(POCA)@2', and 20220419-YCF 35-33-1(POCD) with concentrations ranging from 72.1 mg/kg to 403 mg/kg;
- 1,2,4-trimethylbenzene concentrations were exceeded by soil samples 20220419-YCF 35-33-1(POCA), 20220419-YCF 35-33-1(POCA)@2', 20220419-YCF 35-33-1(POCB)@2', 20220419-YCF 35-33-1(POCD), and 20220419-YCF 35-33-1(POCD)@2' with concentrations ranging from 0.0294 mg/kg to 73.0 mg/kg;
- 1,3,5-trimethylbenzene concentrations were exceeded by soil samples 20220419-YCF 35-33-1(POCA), 20220419-YCF 35-33-1(POCA)@2', 20220419-YCF 35-33-1(POCB), 20220419-YCF 35-33-1(POCB)@2', 20220419-YCF 35-33-1(POCC), 20220419-YCF 35-33-1(POCC)@2', 20220419-YCF 35-33-1(POCD), and 20220419-YCF 35-33-1(POCD)@2' with concentrations ranging from 0.0219 mg/kg to 57.6 mg/kg;
- 1-methylnaphthalene concentrations were exceeded by soil samples 20220419-YCF 35-33-1(POCA), 20220419-YCF 35-33-1(POCA)@2', 20220419-YCF 35-33-1(POCD), and 20220419-YCF 35-33-1(POCD)@2' with concentrations ranging from 0.210 mg/kg to 2.67 mg/kg;
- 2-methylnaphthalene concentrations were exceeded by soil samples 20220419-YCF 35-33-1(POCA), 20220419-YCF 35-33-1(POCA)@2', 20220419-YCF 35-33-1(POCB), 20220419-YCF 35-33-1(POCD), and 20220419-YCF 35-33-1(POCD)@2 with concentrations ranging from 0.0242 mg/kg to 11.3 mg/kg; and
- Naphthalene concentrations were exceeded by soil samples 20220419-YCF 35-33-1(POCA), 20220419-YCF 35-33-1(POCA)@2', 20220419-YCF 35-33-1(POCC)@2', 20220419-YCF 35-33-1(POCD), and 20220419-YCF 35-33-1(POCD)@2' with concentrations ranging from 0.0217 mg/kg to 4.67 mg/kg.

Laboratory analytical results of soil sample 20220419-YCF 35-33-1(POCD)@2' indicated an exceedance of COGCC Table 915-1 Clean-up Concentration (CC) for SAR with a concentration of 7.76. Three of the eight POC soil samples [20220419-YCF 35-33-1(POCA), 20220419-YCF 35-33-1(POCA)@2', and 20220419-YCF 35-33-

1(POCD)] exceeded the COGCC Table 915-1 Level Concentrations (LC) for total petroleum hydrocarbons (TPH) with concentrations ranging from 1,364.8 mg/kg in 20220419-YCF 35-33-1(POCA)@2' to 5,335.8 mg/kg in 20220419-YCF 35-33-1(POCA). All other analytes were either below the laboratory detection limit or within the Table 915-1 PGSSLCs.

All background soil samples exceeded COGCC Table 915-1 PGSSLC (M) for arsenic with concentrations ranging from 3.33 mg/kg in 20220419-YCF 35-33-1(BGW) to 4.15 mg/kg in 20220419-YCF 35-33-1(BGE). Lastly, background soil sample 20220419-YCF 35-33-1(BGW) exceeded COGCC Table 915-1 PGSSLC (M) and (R) for barium, 1,2,4-trimethylbenzene, and 1,3,5-trimethylbenzene with concentrations of 341 mg/kg, 0.0140 mg/kg, and 0.0148 mg/kg, respectively. All laboratory analytical results are included in Enclosure A and summarized in Table 1.

## CONCLUSIONS – YCF 35-33-1 LOADOUT LINE LEAK

Based on the analytical data provided from the initial assessment sampling, there are identified COGCC Table 915-1 exceedances of arsenic, barium, TPH, BTEX, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, 1-methylnaphthalene, 2-methylnaphthalene, naphthalene, and SAR, associated with the off-load line release. WSP recommends that Caerus continue investigative delineation activities immediately within the release path observed on the pad surface immediately south of the metal secondary containment. WSP proposes that up to five soil borings be advanced, one located within the center of the identified release area and four in each cardinal direction surrounding release area in an attempt to define impacts laterally and vertically to the soil. If lateral impacts are observed beyond the four advanced surrounding the release area, subsequent soil borings will be advanced in each cardinal direction until impacts are defined. These soil borings will be advanced up to five feet past field observed hydrocarbon impacts.

Prior to any additional investigative soil sampling, WSP recommends that Caerus request a reduced analytical suite to include the analysis for all future samples of arsenic, barium, TPH, BTEX, 1,2,4-trimethylbenzene & 1,3,5-trimethylbenzene, 1-methylnaphthalene & 2-methylnaphthalene, naphthalene, and SAR.

Please contact us at (970) 618-4514 or (970) 658-7025 if you have any questions regarding this report or require additional information.

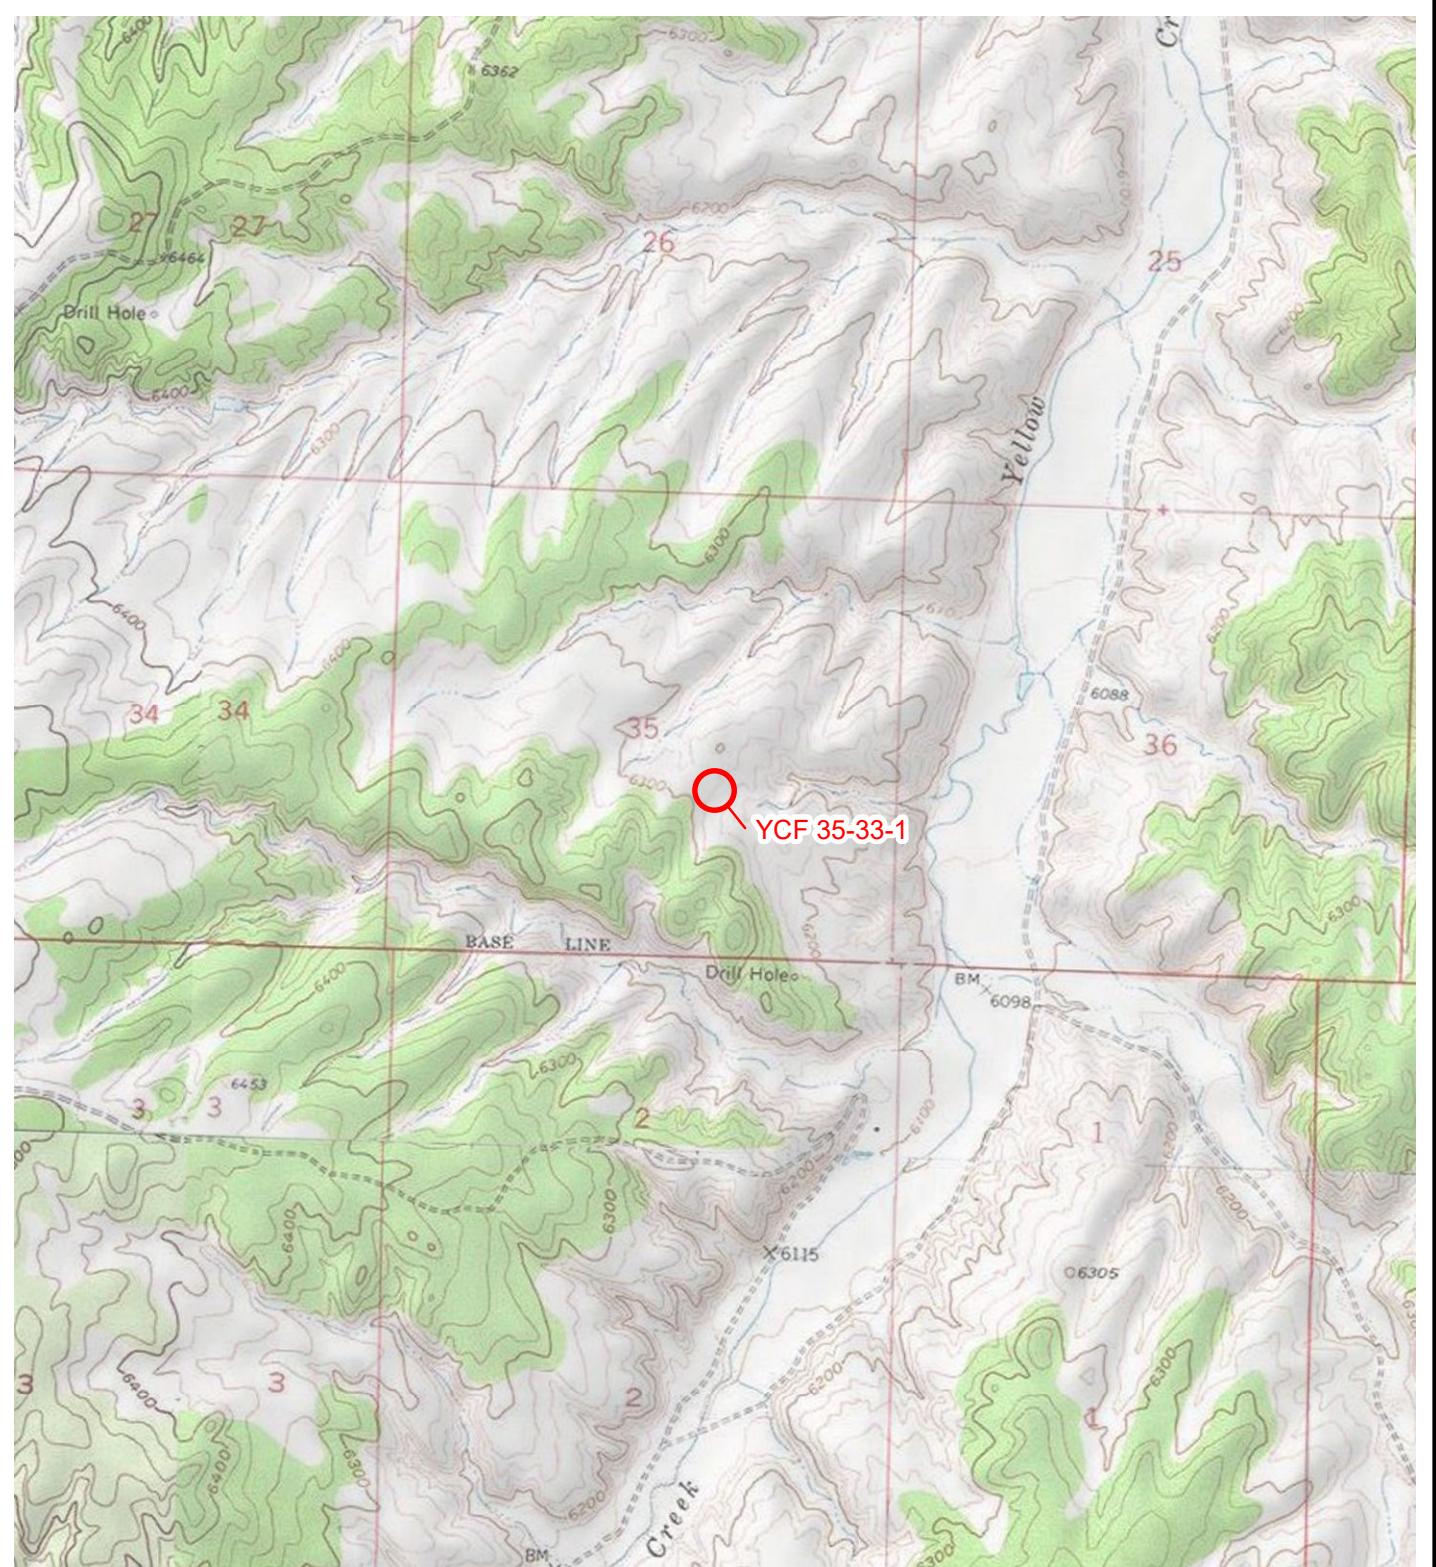

Kind regards,

## NOTES:

BOLD - indicates result exceeds the COGCC residential soil screening level concentration

COGCC - Colorado Oil and Gas Conservation Commission

EC- electrical conductivity

mg/l - milligrams per liter

mg/kg - milligrams per kilogram

mmhos/cm - millimhos per centimeter

SAR - sodium adsorption ratio

SU - standard unit

TPH-ORO - total petroleum hydrocarbons- oil range organics

TPH-GRO - total petroleum hydrocarbons-gasoline range organics

TPH-DRO - total petroleum hydrocarbons-diesel range organics

TPH - combination of TPH-GRO, TPH-DRO, and TPH-ORO

NA - analyte not analyzed

ND - analyte not detected

R - risk based

MCL - maximum containment level (M)

## NOTES:

**BOLD** - indicates result exceeds the COGCC residential soil screening level concentration  
 COGCC - Colorado Oil and Gas Conservation Commission

EC- electrical conductivity

mg/l - milligrams per liter

mg/kg - milligrams per kilogram

mmhos/cm - millimhos per centimeter

SAR - sodium adsorption ratio

SU - standard unit

TPH-ORO - total petroleum hydrocarbons- oil range organics

TPH-GRO - total petroleum hydrocarbons-gasoline range organics

TPH-DRO - total petroleum hydrocarbons-diesel range organics

TPH - combination of TPH-GRO, TPH-DRO, and TPH-ORO

NA - analyte not analyzed

ND - analyte not detected

R - risk based

MCL - maximum containment level (M)

## NOTES:

**BOLD** - indicates result exceeds the COGCC residential soil screening level concentration  
 COGCC - Colorado Oil and Gas Conservation Commission

EC - electrical conductivity

mg/l - milligrams per liter

mg/kg - milligrams per kilogram

mmhos/cm - millimhos per centimeter

SAR - sodium adsorption ratio

SU - standard unit

TPH-ORO - total petroleum hydrocarbons- oil range organics

TPH-GRO - total petroleum hydrocarbons-gasoline range organics

TPH-DRO - total petroleum hydrocarbons-diesel range organics

TPH - combination of TPH-GRO, TPH-DRO, and TPH-ORO

NA - analyte not analyzed

ND - analyte not detected

R - risk based

MCL - maximum containment level (M)

Revised Report

## Caerus Oil and Gas

Sample Delivery Group: L1485076  
Samples Received: 04/21/2022  
Project Number: YCF 35-33-1  
Description: YCF 35-33-1  
Site: YCF 35-33-1  
Report To: Brett Middleton  
143 Diamond Avenue  
Parachute, CO 81635

Entire Report Reviewed By:

Chris Ward  
Project Manager

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

# CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

# GLOSSARY OF TERMS

## Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

**Results Disclaimer -** Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

### Abbreviations and Definitions

|                              |  |      |
|------------------------------|--|------|
| MDL                          | Method Detection Limit.  | 1 Cp |
| ND                           | Not detected at the Reporting Limit (or MDL where applicable).   | 2 Tc |
| RDL                          | Reported Detection Limit.  | 3 Ss |
| Rec.                         | Recovery.  | 4 Cn |
| RPD                          | Relative Percent Difference.   | 5 Sr |
| SDG                          | Sample Delivery Group.   | 6 Qc |
| (S)                          | Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.   | 7 Gi |
| U                            | Not detected at the Reporting Limit (or MDL where applicable).   | 8 Al |
| Analyte                      | The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.   | 9 Sc |
| Dilution                     | If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.  |      |
| Limits                       | These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.  |      |
| Original Sample              | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.  |      |
| Qualifier                    | This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.  |      |
| Result                       | The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte. |      |
| Uncertainty (Radiochemistry) | Confidence level of 2 sigma.   |      |
| Case Narrative (Cn)          | A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.  |      |
| Quality Control Summary (Qc) | This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.  |      |
| Sample Chain of Custody (Sc) | This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.  |      |
| Sample Results (Sr)          | This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.   |      |
| Sample Summary (Ss)          | This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.  |      |

### Qualifier

### Description

|    |   |
|----|---|
| B  | The same analyte is found in the associated blank.  |
| E  | The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL). |
| J  | The identification of the analyte is acceptable; the reported value is an estimate.   |
| J1 | Surrogate recovery limits have been exceeded; values are outside upper control limits.  |
| J2 | Surrogate recovery limits have been exceeded; values are outside lower control limits.  |
| J7 | Surrogate recovery cannot be used for control limit evaluation due to dilution.   |
| T8 | Sample(s) received past/too close to holding time expiration.   |
| V  | The sample concentration is too high to evaluate accurate spike recoveries.   |

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

# CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

# GLOSSARY OF TERMS

## Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

**Results Disclaimer -** Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

### Abbreviations and Definitions

|                              |  |                 |
|------------------------------|--|-----------------|
| MDL                          | Method Detection Limit.  | <sup>1</sup> Cp |
| ND                           | Not detected at the Reporting Limit (or MDL where applicable).   | <sup>2</sup> Tc |
| RDL                          | Reported Detection Limit.  | <sup>3</sup> Ss |
| Rec.                         | Recovery.  | <sup>4</sup> Cn |
| RPD                          | Relative Percent Difference.   | <sup>5</sup> Sr |
| SDG                          | Sample Delivery Group.   | <sup>6</sup> Qc |
| (S)                          | Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.   | <sup>7</sup> GI |
| U                            | Not detected at the Reporting Limit (or MDL where applicable).   | <sup>8</sup> Al |
| Analyte                      | The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.   | <sup>9</sup> Sc |
| Dilution                     | If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.  |                 |
| Limits                       | These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.  |                 |
| Original Sample              | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.  |                 |
| Qualifier                    | This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.  |                 |
| Result                       | The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte. |                 |
| Uncertainty (Radiochemistry) | Confidence level of 2 sigma.   |                 |
| Case Narrative (Cn)          | A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.  |                 |
| Quality Control Summary (Qc) | This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.  |                 |
| Sample Chain of Custody (Sc) | This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.  |                 |
| Sample Results (Sr)          | This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.   |                 |
| Sample Summary (Ss)          | This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.  |                 |

| Qualifier | Description   |
|-----------|---|
| E         | The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL). |
| J         | The identification of the analyte is acceptable; the reported value is an estimate.   |
| T8        | Sample(s) received past/too close to holding time expiration.   |
| V         | The sample concentration is too high to evaluate accurate spike recoveries.   |
