## COMMENTS:

"Bradenhead diagnostic evaluation. The bradenhead has been monitored since 12/01/21. During this diagnostic evaluation period the bradenhead was blown down on 4/14/22. During this same diagnostic evaluation period the pressures did not remain below the bradenhead pressure threshold and when blown down the pressures began to build right away. Scout will plumb the surface casing of this producer into its own production flowline as is seen on the attached diagram by 5/27/22. This will maintain the pressure below the 227 psi threshold as flowline pressure ranges from ~80-145 psi.
