How was extent determined?			
<p>During production facility decommissioning activities at the Paradise V 16-22 O SA Production Facility on May 26, 2022, five (5) confirmation soil samples were collected from the locations of the former facility infrastructure. Based on field observations, soil sample SEP-B01@3', collected from below the former separator location, was selected for waste characterization purposes and was submitted for laboratory analysis of the full COGCC Table 915-1 analytical suite, using COGCC-approved methods appropriate for detecting the target analytes. The remaining confirmation soil samples were submitted for laboratory analysis of select constituents in Table 915-1 using COGCC-approved methods appropriate for detecting the target analytes, in accordance with COGCC Operator Guidance - Rule 911.A.(4) - Oil and Gas Facility Closure and Rules 913 and 915. Preliminary analytical results indicate that the benzene, 1,2,4- and 1,3,5-trimethylbenzene (TMB) concentrations in soil sample SEP-B01@3' exceeded the COGCC Table 915-1 Protection of Groundwater Soil Screening Level Concentrations. Preliminary analytical results indicate that constituent concentrations in the remaining soil samples collected during facility decommissioning activities were in compliance with the applicable COGCC Table 915-1 standards. Additional soil analytical results for sample SEP-B01@3' are pending laboratory analysis and final reporting. Excavation and assessment activities are ongoing and will be summarized in a forthcoming quarterly Form 27-Supplemental Site Investigation and Remediation Workplan under Remediation Project No. 23056 (approved Form 27 Document No. 403038083). A topographic Site Location Map showing the geographic setting of the release is provided as Figure 1. Soil sample location and field screening data are provided in Table 1.
