**COMMENTS:**

TEP Rocky Mountain LLC (TEP) is reporting that the bradenhead on the GGU Daley 14D-20-691 has been connected to the sales separator as part of a Pressure Management Plan. On 4/5/2022, the GGU Daley 14D-20-691 had a bradenhead pressure of 231 psi. This well has a surface casing depth (TVD) of 771', however this well is located within the Mamm Creek Bradenhead Monitoring Area and has a threshold pressure of 150 psi. TEP performed a blowdown test and submitted the test results via a Form 17 on 4/6/2022. A copy of the Form 17 is included in the "Related Forms" section. TEP monitored the bradenhead pressure after performing the test and determined that the bradenhead pressure continued to build and sustain pressures above the calculated threshold pressure. On 6/2/2022, TEP connected the bradenhead to the sales separator as part of a Pressure Management Plan for this well. The average sales line pressure for this well is 77 psi. The bradenhead was connected to the sales line with 2" steel pipe and a check valve. A typical diagram is attached which depicts the bradenhead connection.
