COMMENTS:

TEP Rocky Mountain LLC (TEP) respectfully reports the results of recent diagnostic testing on the GM 432-27. The diagnostic testing resulted from the bradenhead exceeding the threshold pressure on April 25, 2022. The Form 17 reporting the results of the recent bradenhead test is included in the "Related Forms" section. TEP monitored the bradenhead pressures and determined that the bradenhead pressure has stabilized below the threshold pressure. The bradenhead pressure was 108 psi on June 8, 2022. The historical bradenhead testing data does not indicate that this well has a history of exceeding the calculated bradenhead threshold pressure of 215 psi. An annual bradenhead test was performed on August 11, 2021, and the initial surface casing pressure was 200 psi and below the threshold pressure. Based on the annual bradenhead test performed on August 11, 2021, it took the surface casing approximately 8.5 months to build to a pressure of 222 psi that was recorded on the April 25, 2022, Form 17. TEP will continue to monitor the bradenhead pressures as part of our monthly monitoring program and report any future bradenhead threshold pressure exceedances as required by Rule.
