Per Rule 304.b.(6), provide a description of all onsite and off-location oil, gas, and/or water flowlines.

Crestone will trench flowlines in one piping corridor that runs between the drill pad and the separator pad and be placed at 12" centers. These lines will most likely be 2" or 3" fusion bonded SCH160 steel pipe and have proper cathodic protection throughout the run. Crestone will then sweep up with a long radius that will tie off each line to the appropriate separator. All welds on these are 100% x-ray and hydro tested to the API and Manufactures specs for a class 1500 series flange. Also meets ASME code B31.4.

GROUNDWATER AND WATER WELL INFORMATION

Provide the distance and direction, as measured from the Working Pad Surface, to the nearest:

water well: 281 Feet E

Spring or Seep: 5280 Feet NW

Estimated depth to shallowest groundwater that can be encountered at this Oil and Gas Location: 46 Feet

Basis for estimated depth to and description of shallowest groundwater occurrence:

Free water was not encountered during the Geotechnical surveys which bored to a depth of 20'. Therefore, it is assumed that the shallowest groundwater is related to the nearby water well (CDWR Permit #303466-, Elevation 4823') that has an estimated water Level of 33'. Adjusting for the elevation difference it is estimated that ground water is at a depth of approximately 46' where the pad is proposed.
