**General Comment:**

On 06/10/2022, Reclamation Specialist O'Malley conducted a final reclamation and stormwater inspection at SWN Production Company LLC's Antietam-67N93W /12NWNW Location #313347 in Moffat County, Colorado.

The following compliance issues were observed during this inspection:

- Noxious Weeds
- Final reclamation not completed per 1004 Rules

Refer to the "Location," "Reclamation," "Stormwater" and "COGCC Comments" sections of this inspection report for additional details.

Refer to the photo-documentation of the observed compliance issues attached to this report.

Any corrective action(s) from previous inspections that have not been addressed are still applicable.

A follow up inspection on this site will be conducted to ensure the compliance issues have been corrected to comply with COGCC rules.

**Good Housekeeping:**

Type	WEEDS		
Comment:	It was observed in this inspection that noxious weeds and undesirable plant species are widespread and dominate the plant community on the Location. Species include musk and Scotch thistle, cheatgrass, Russian thistle, desert madwort and tall tumble mustard. It appears the Location was recently sprayed to treat weeds and most weeds on Location appeared impacted. However, some individuals appear not to have been sprayed, especially those on the margins of the Location. It was also observed that previously reclaimed areas to the north and east have not been treated and weeds are widespread. Follow up treatment and continuous weed management will be necessary.		
Corrective Action:	Conduct weed management to prevent further establishment and spread of Noxious weeds and undesirable plant species on the entire Location, including the previously reclaimed areas to the north and east; ongoing weed management required until location passes final reclamation.		Date: <u>06/28/2022</u>

**COGCC Comments**

Comment	User	Date
<p style="color: blue;"><u>Reclamation Comments</u></p> <p style="color: blue;">It was observed in this inspection that the Location has been partially reclaimed. Stormwater BMPs and various berms are still present at the north and east of the Location, therefore the Location has not been completely recontoured to match the surrounding landscape. It appears the Location has not been decompacted. Soils were platy, and very difficult to penetrate with a shovel. The soil surface appears to have been graded smooth. A rough soil surface may produce better results for revegetation and is beneficial for increasing infiltration and reducing erosion potential. Seeding appears to have failed. Seeded species are rare and the Location is dominated by undesirable plant species and noxious weeds. Seeded species include crested wheatgrass, smooth brome and Russian wildrye and are non-native and not found in reference areas. Flowline risers were observed to the west of the Location, across the road. All equipment associated with the Location, including risers and power lines must be removed for final reclamation.</p>	omalleya	06/14/2022
