General Comment:

On 06/10/2022, Reclamation Specialist O'Malley conducted a final reclamation and stormwater inspection at SWN Production Company LLC's Boston Federal-67N93W /2NWSE Location #313328 in Moffat County, Colorado.

The following compliance issues were observed during this inspection:

- Noxious Weeds
- Final reclamation not completed per 1004 Rules

Refer to the "Location," "Reclamation," "Stormwater" and "COGCC Comments" sections of this inspection report for additional details.

Refer to the photo-documentation of the observed compliance issues attached to this report.

Any corrective action(s) from previous inspections that have not been addressed are still applicable.

A follow up inspection on this site will be conducted to ensure the compliance issues have been corrected to comply with COGCC rules.

Corrective Action:	<p style="color: red;">Remove all power lines and risers associated with Location and reclaim areas impacted by removal.</p> <p style="color: red;">Reclaim access road.</p> <p style="color: red;">Perform final reclamation on Location as applicable including but not limited to compaction alleviation (cross ripping to a minimum depth of 18 inches) or documentation of previous decompaction, berm removal, and revegetation of the Location. Use a seed mix from the surface owner, or prescribed by the local soil conservation district. Provide, attached to an FIRR a signed Surface Owner letter indicating the seed mix for final reclamation. In the absence of an agreement between the Operator and the Surface Owner, provide a signed letter indicating the seed mix for final reclamation from the soil conservation district.</p>	Date 11/15/2022

Pits: <input type="checkbox"/> NO SURFACE INDICATION OF PIT						

COGCC Comments

Comment	User	Date
<p style="color: blue;">Final Reclamation Comments</p> <p style="color: blue;">It was observed in this inspection that the Location access road is present and remains unreclaimed. Stormwater BMPs/berms are present at the south of the Location. Power lines and a riser that appear to be associated with the Location were observed to the southeast and east of the Location, respectively. All equipment/infrastructure associated with the Location including access roads, berms, risers and power lines must be removed and reclaimed to pass final reclamation.</p> <p style="color: blue;">The Location has been recontoured. It appears the Location has not been decompacted as soils were platy and hard. The soil surface appears to have been graded smooth. A rough soil surface may produce better results for revegetation and is beneficial for increasing infiltration and reducing erosion potential. Seeding appears to have failed. The Location is dominated by bare ground, undesirable plant species and noxious weeds. Smooth brome (likely seeded) is rare. Smooth brome is non-native and not found in reference areas. Per the Surface Use Plan, document #1750369 the Surface Owner requested the use of a non-native perennial grass seed mix which does not include smooth brome and does not match the adjacent reference areas. Refer to document for details. If a different seed mix will be used, Operator must submit a signed Surface Owner letter indicating the new seed mix.</p>	omalleya	06/15/2022
